75105648 BASE FRAME

Version 1.1

BEFORE STARTING THE BUILD

The following are needed for assembly:

- Soft base / underlay (scratch protection)
- A set of hex wrenches
- Ratchet with 13mm nut
- Hammer (mallet)
- Tape measure / ruler
- A buddy who can lend a hand

Read the manual first. All remarks are important and could help you avoid problems.

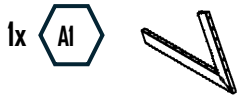

Use BOM (Bill of Material) to find the sizes and lengths of the parts.

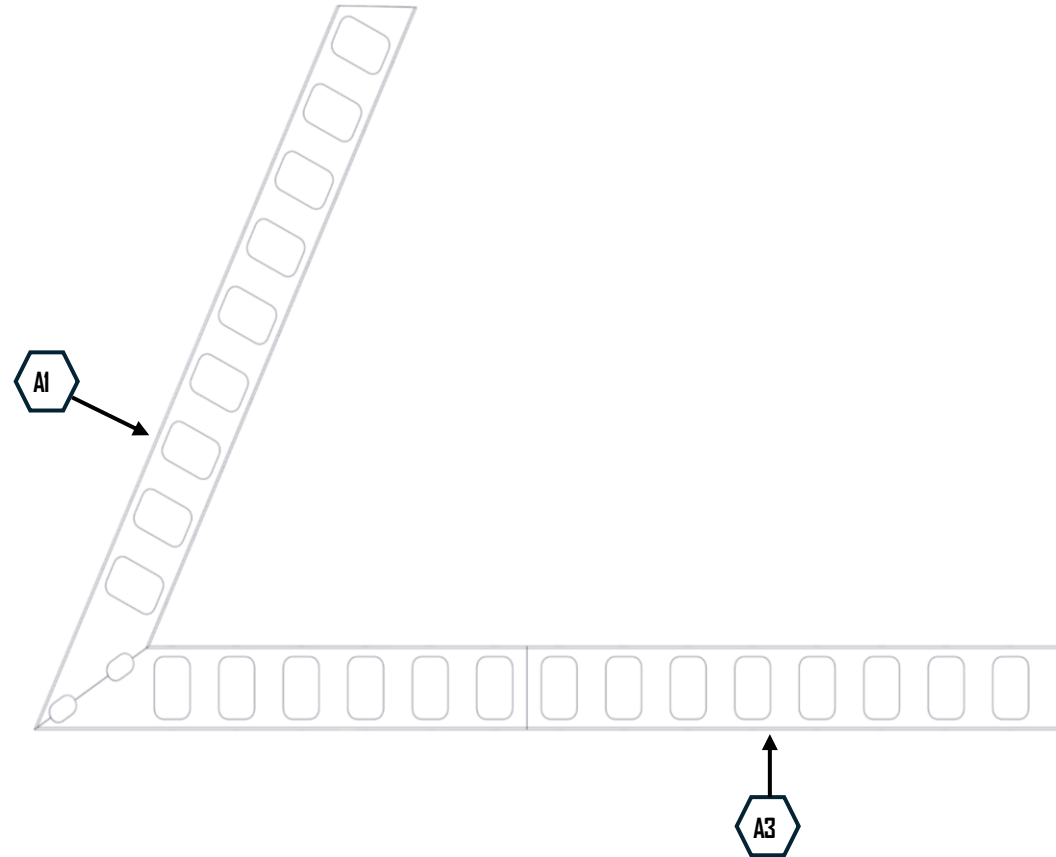

TABLE OF CONTENT

1.	Baseframe	4
2.	Wheel unit - Baseframe parts	21
3.	Wheel unit – Frontmount solution	22
4.	Wheel unit – Topmount solution	25
5.	Pedal unit	28
6.	Wheel deck compatibility	34

4 / 43

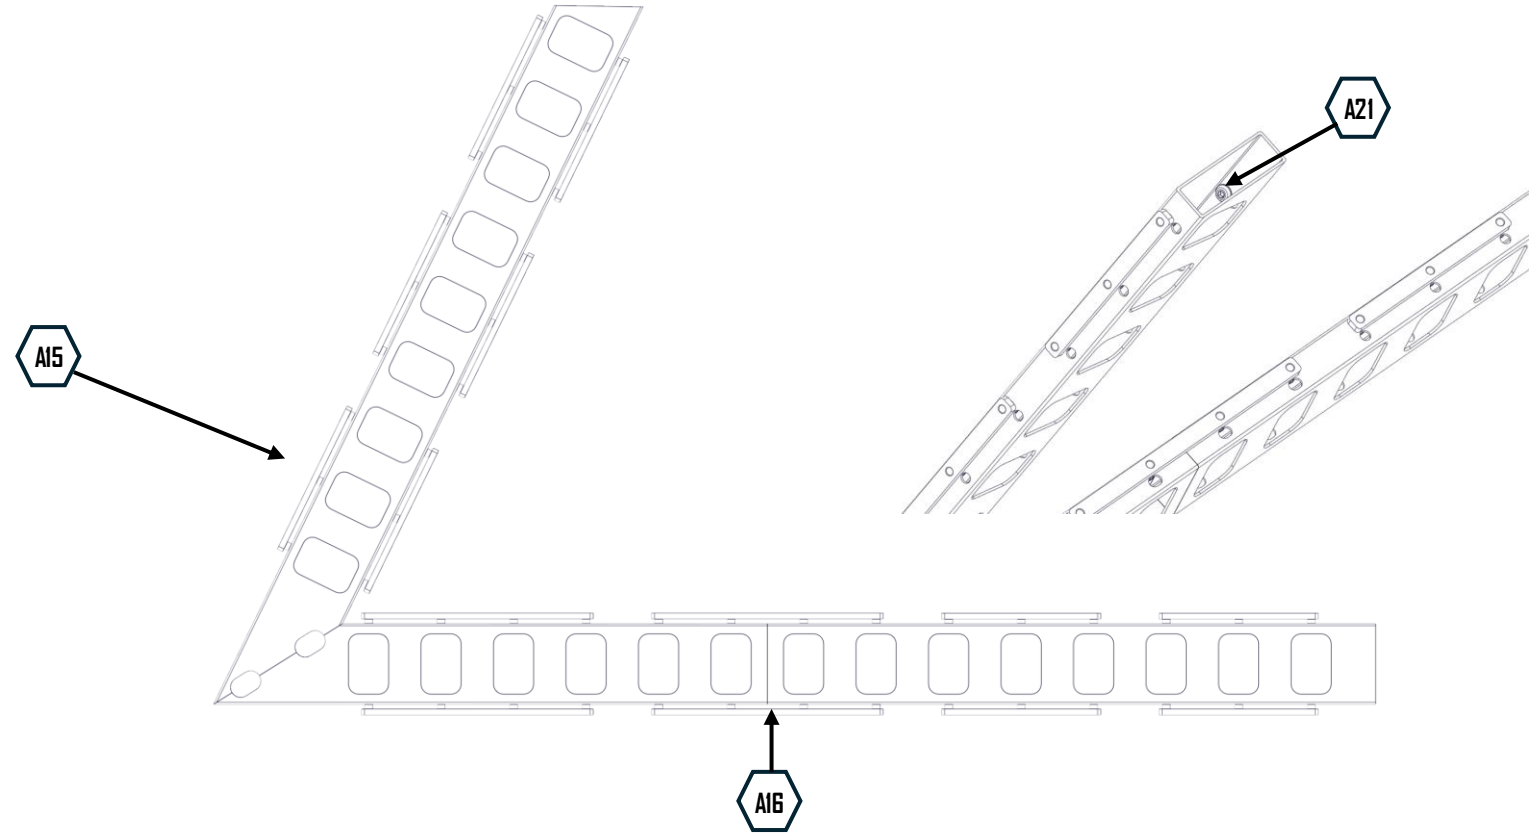

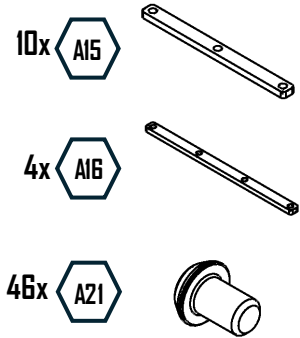

Arrange the (AI) Baseangle +(A3) Baseprofile on a flat, protected and soft surface

BASEFRAME

5 / 43

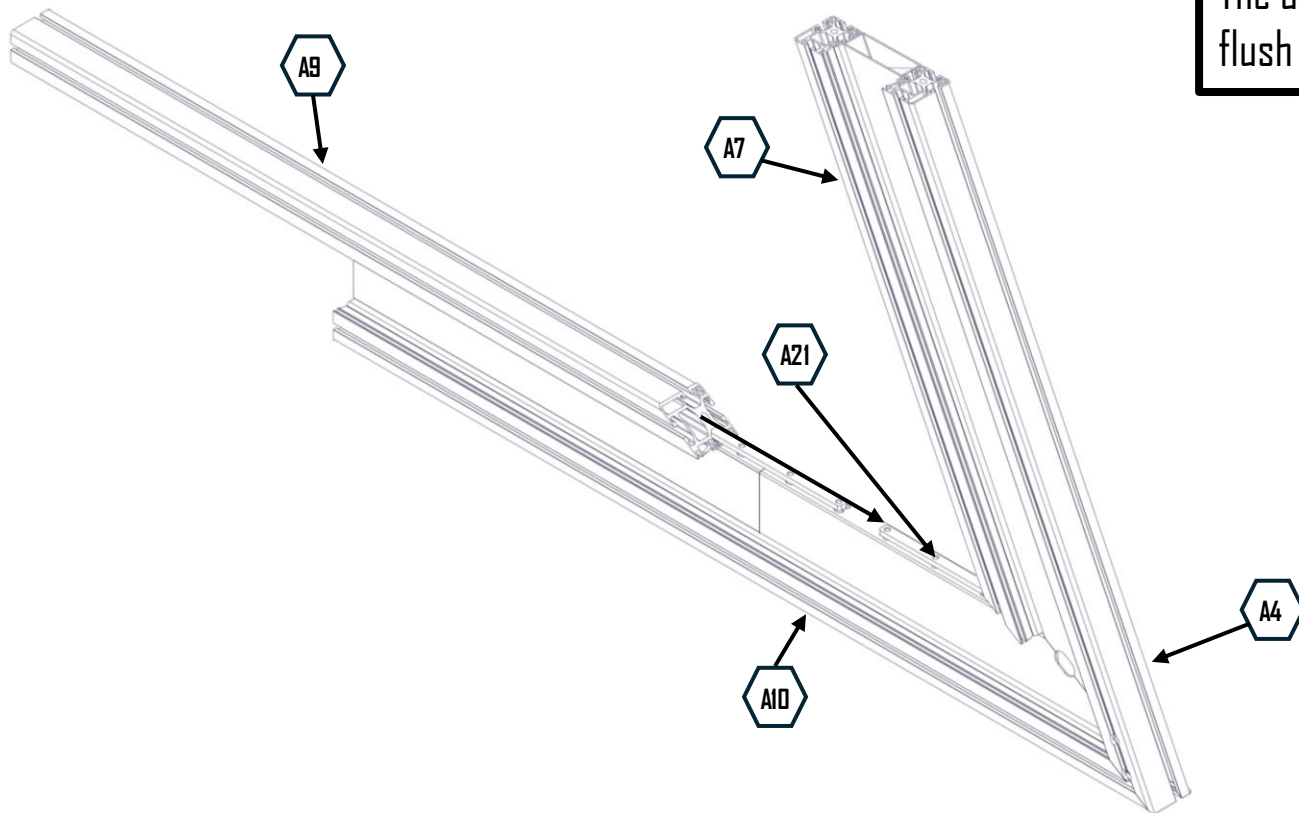

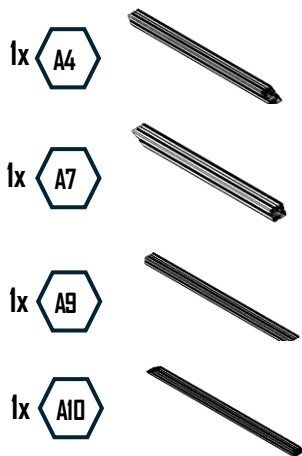

Only fasten the (A21) M8x12 screws by one turn so that the T-nut can slide into the aluminium profiles.

Use the outer holes in (A1) and (A3).

BASEFRAME

6 / 43

Carefully slide all four aluminium extrusions over the prepared T-nuts.

If you encounter any resistance, slightly loosen the nearest (A21) screw.

Then, tighten all 48 (A21) screws.

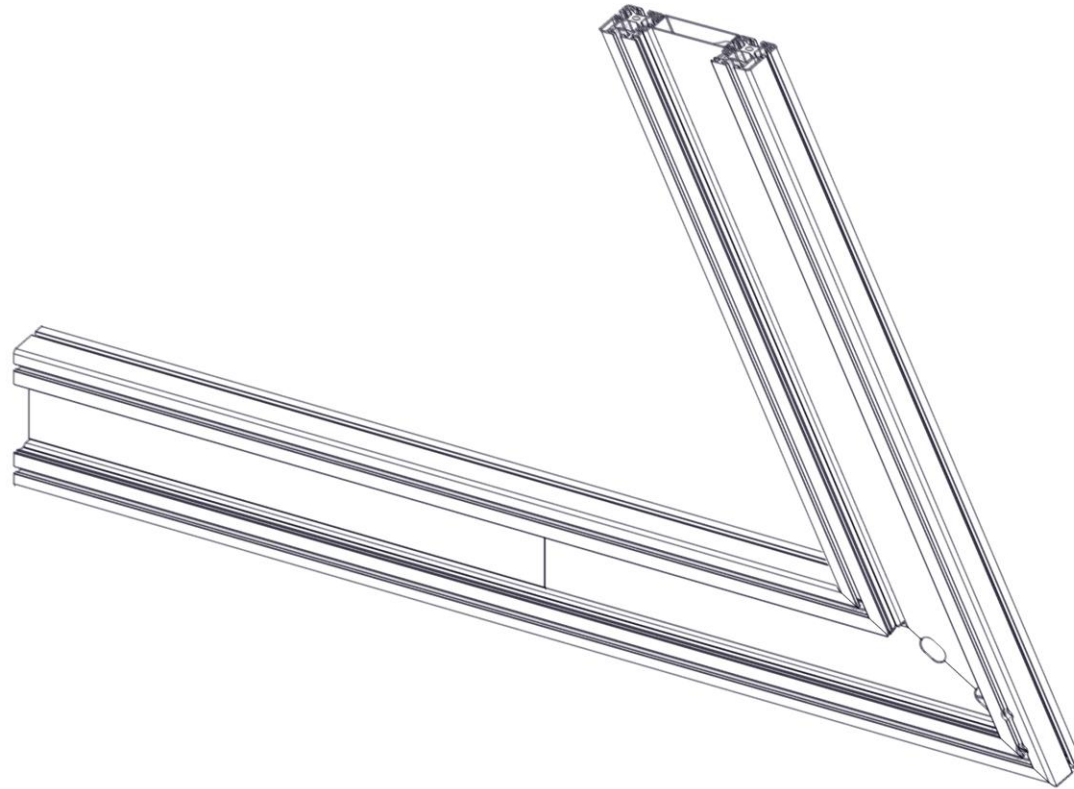

The aluminium extrusions and base frame parts should fit flush at the rear and top.

BASEFRAME

7 / 43

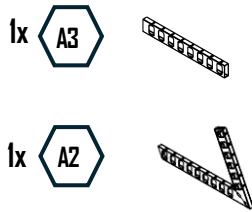

You have finished the right-hand frame.

Now let's follow the same steps for the left frame

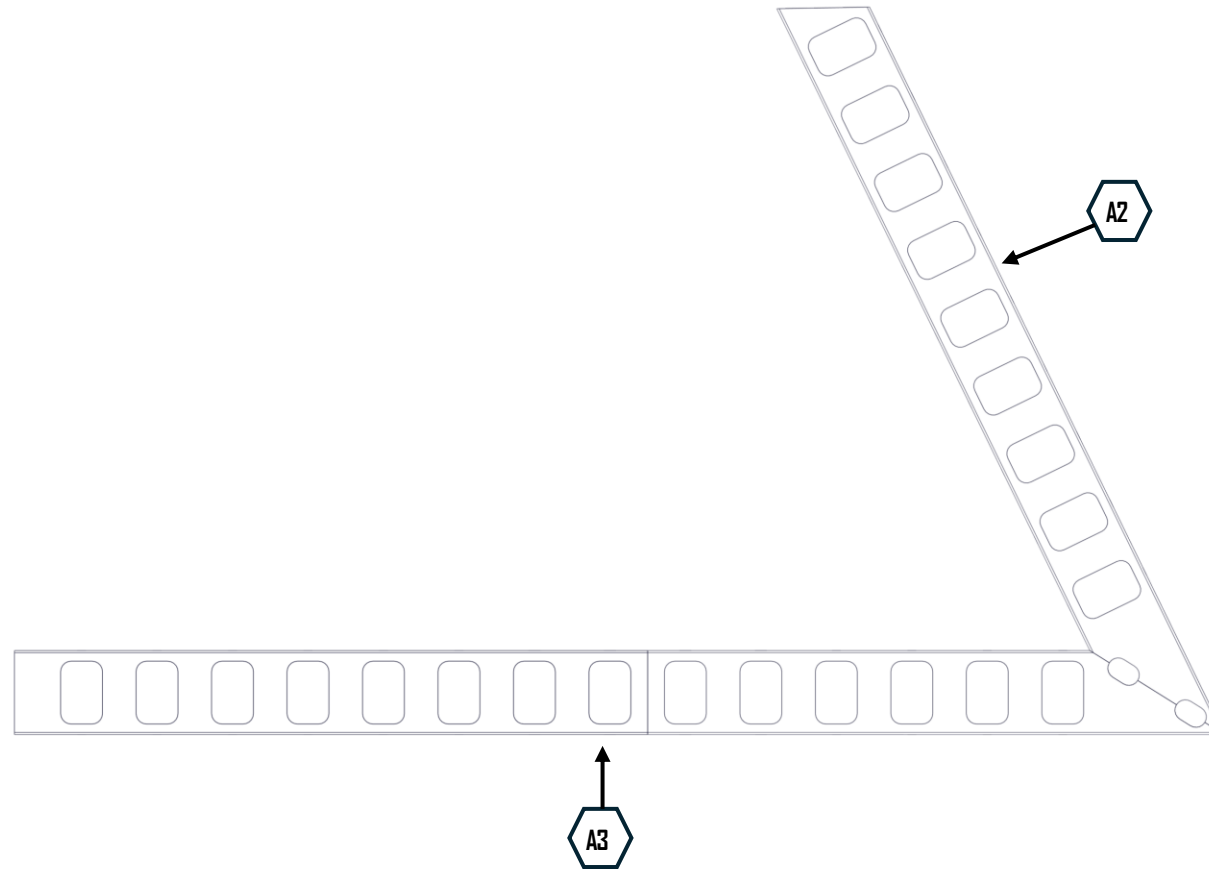

BASEFRAME

8 / 43

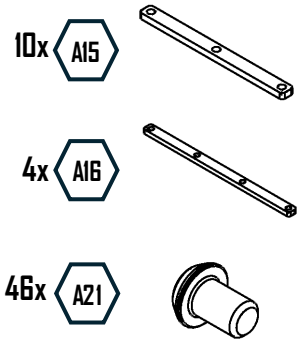

Arrange the (A2) base angle and the (A3) base profile on a flat, protected surface.

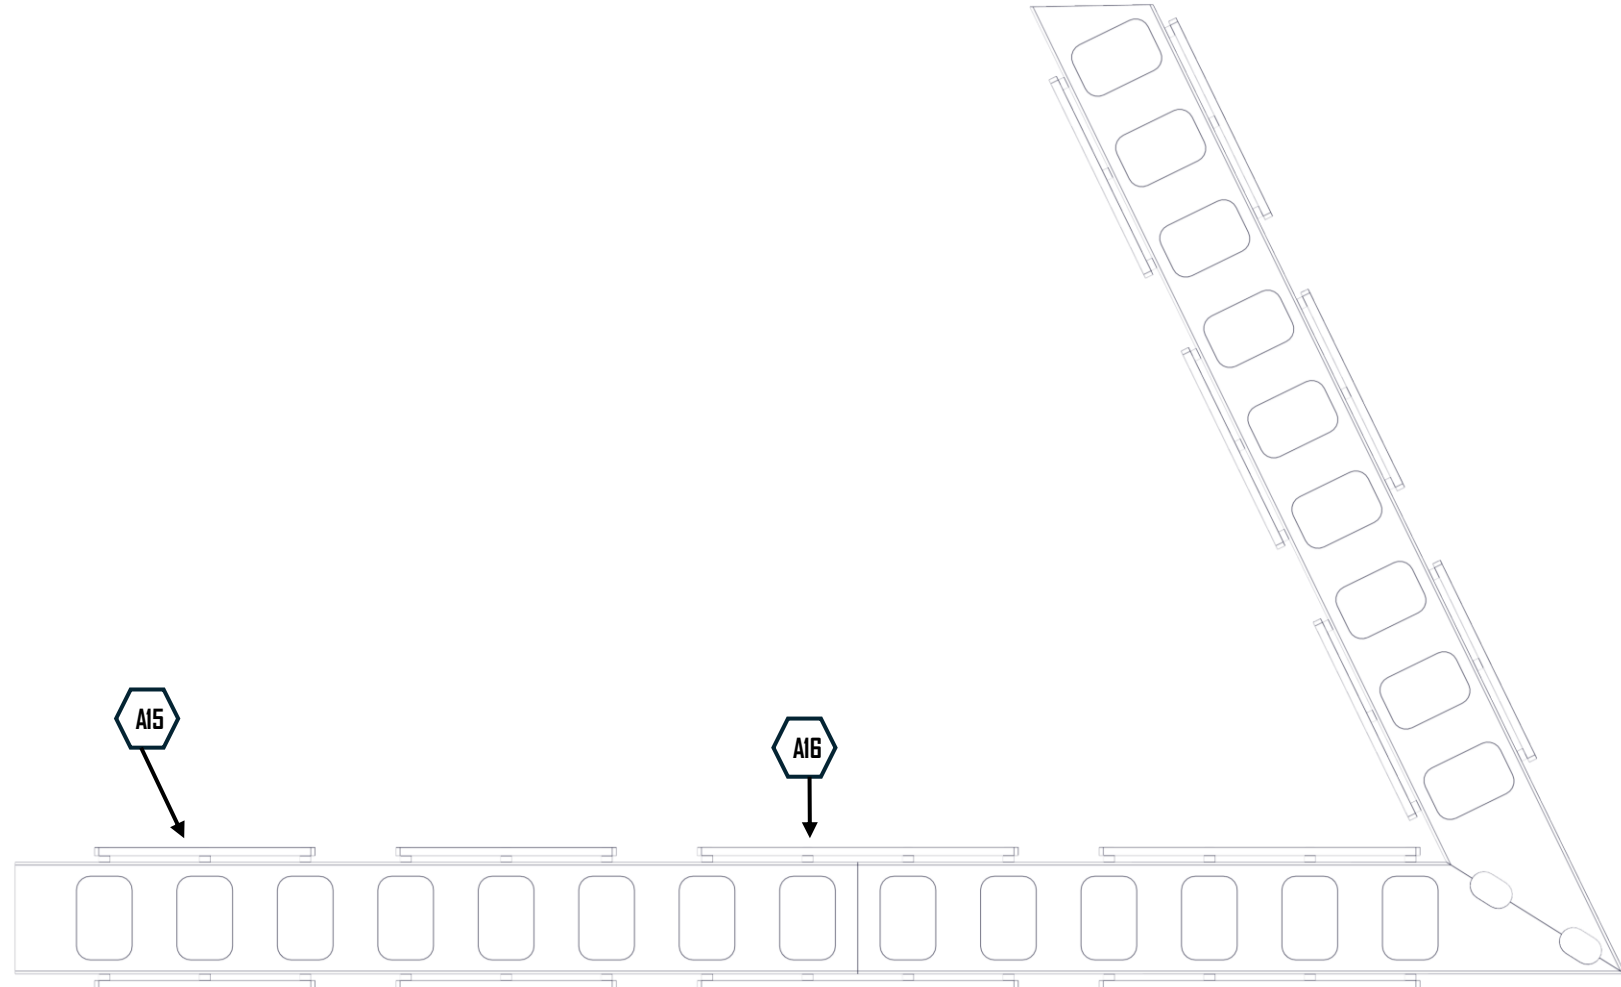

BASEFRAME

9 / 43

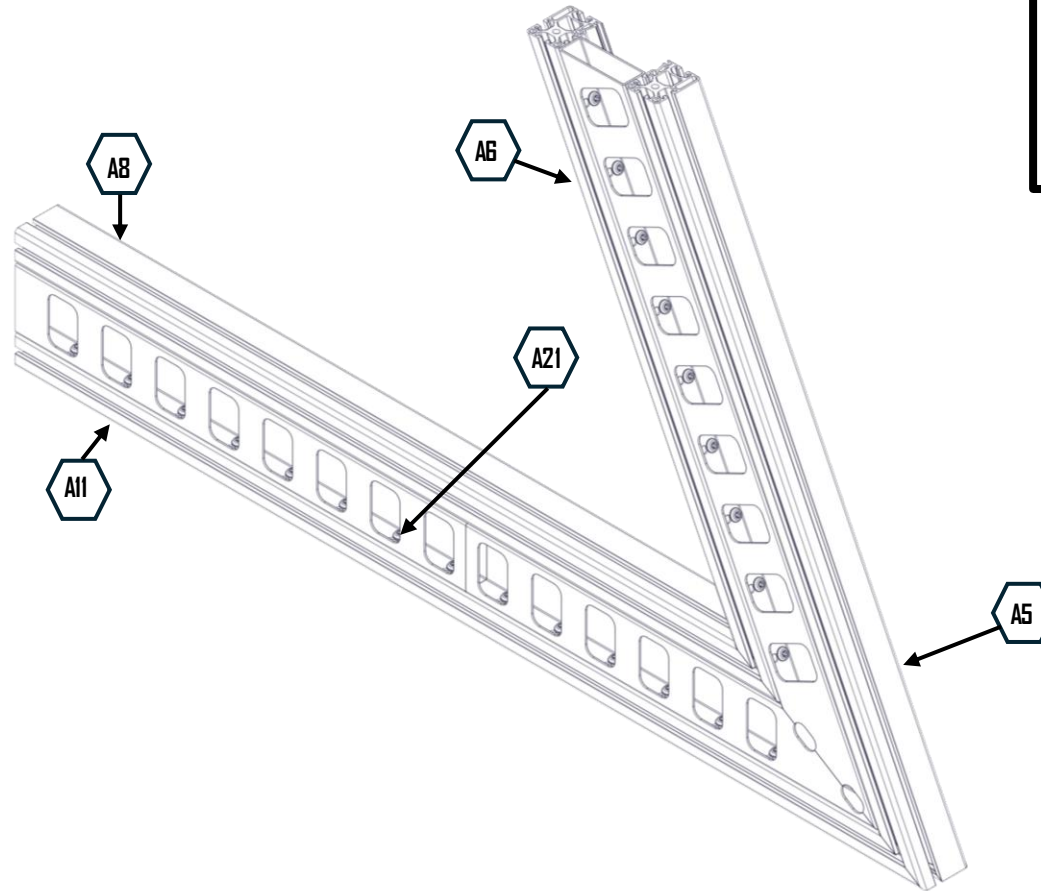

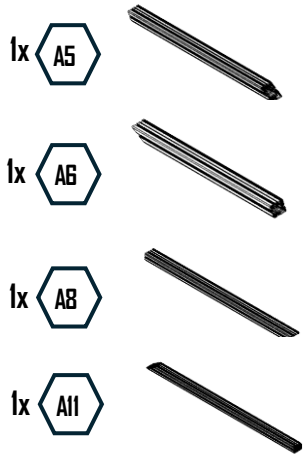

Only fasten the (A21) M8x12 screws by one turn so that the T-nut can slide into the aluminium profiles.

Use the outer holes in (A1) and (A3).

BASEFRAME

10 / 43

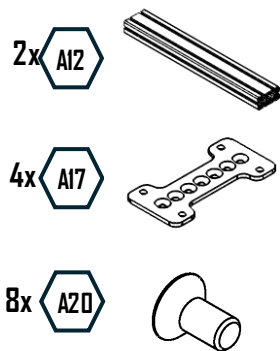

Carefully slide all four aluminium extrusions over the prepared T-nuts.

If you encounter any resistance, slightly loosen the nearest (A21) screw. Then, tighten all 48 (A21) screws.

The aluminium extrusions and base frame parts should fit flush at the rear and top.

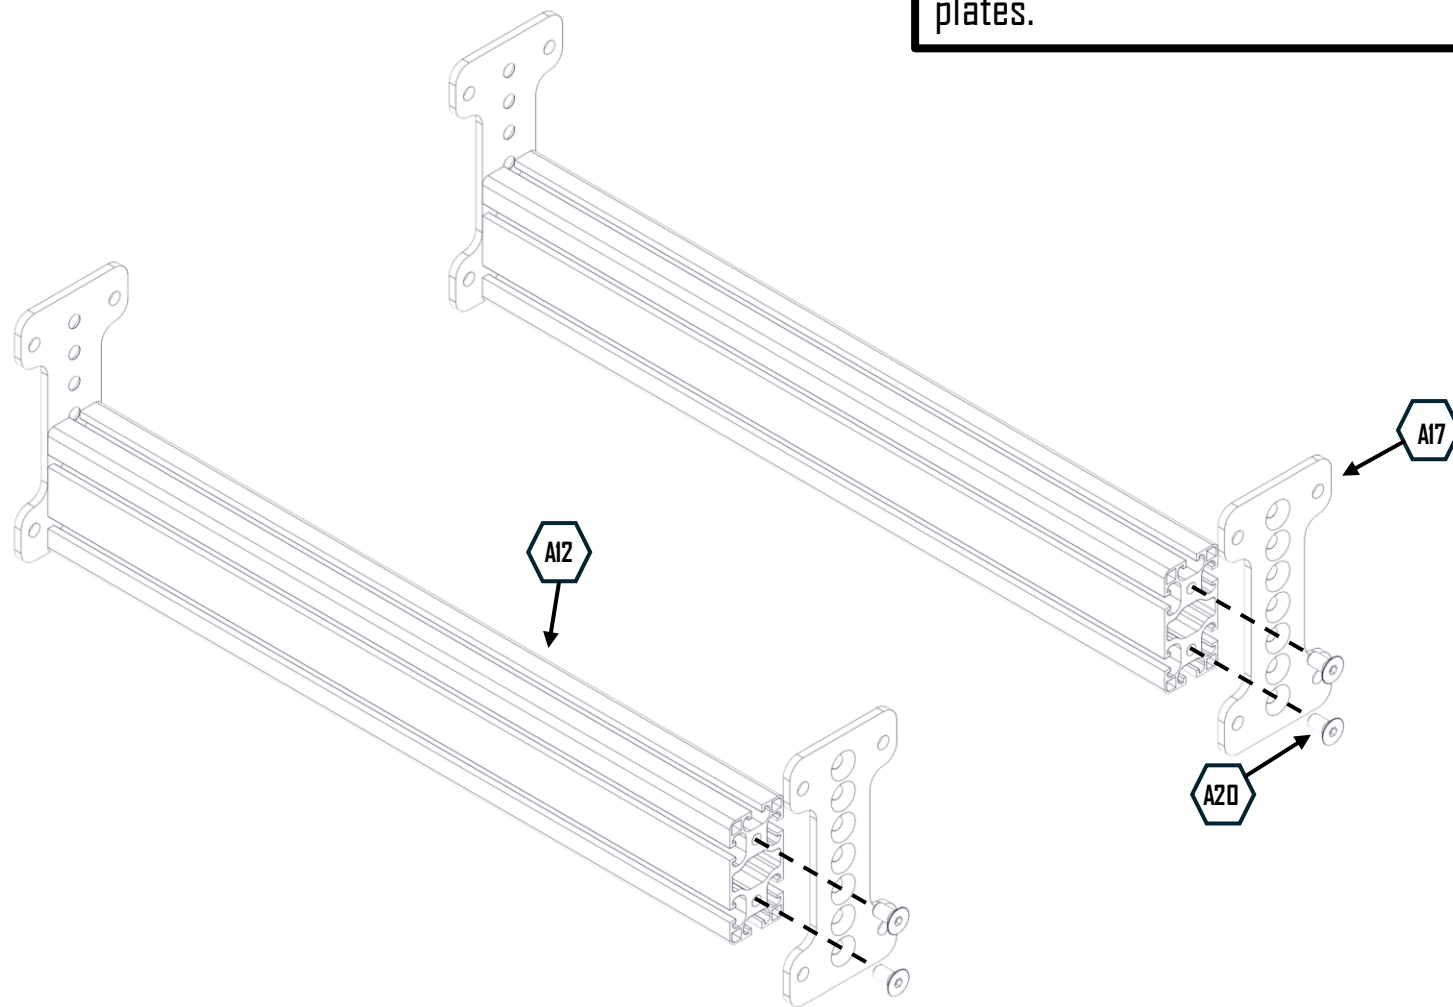

You have finished the left frame.

BASEFRAME

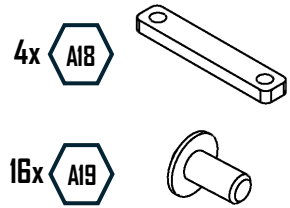

Connect all four plates to the ends of the aluminium extrusions using the (A20) M8x16 countersunk screws.

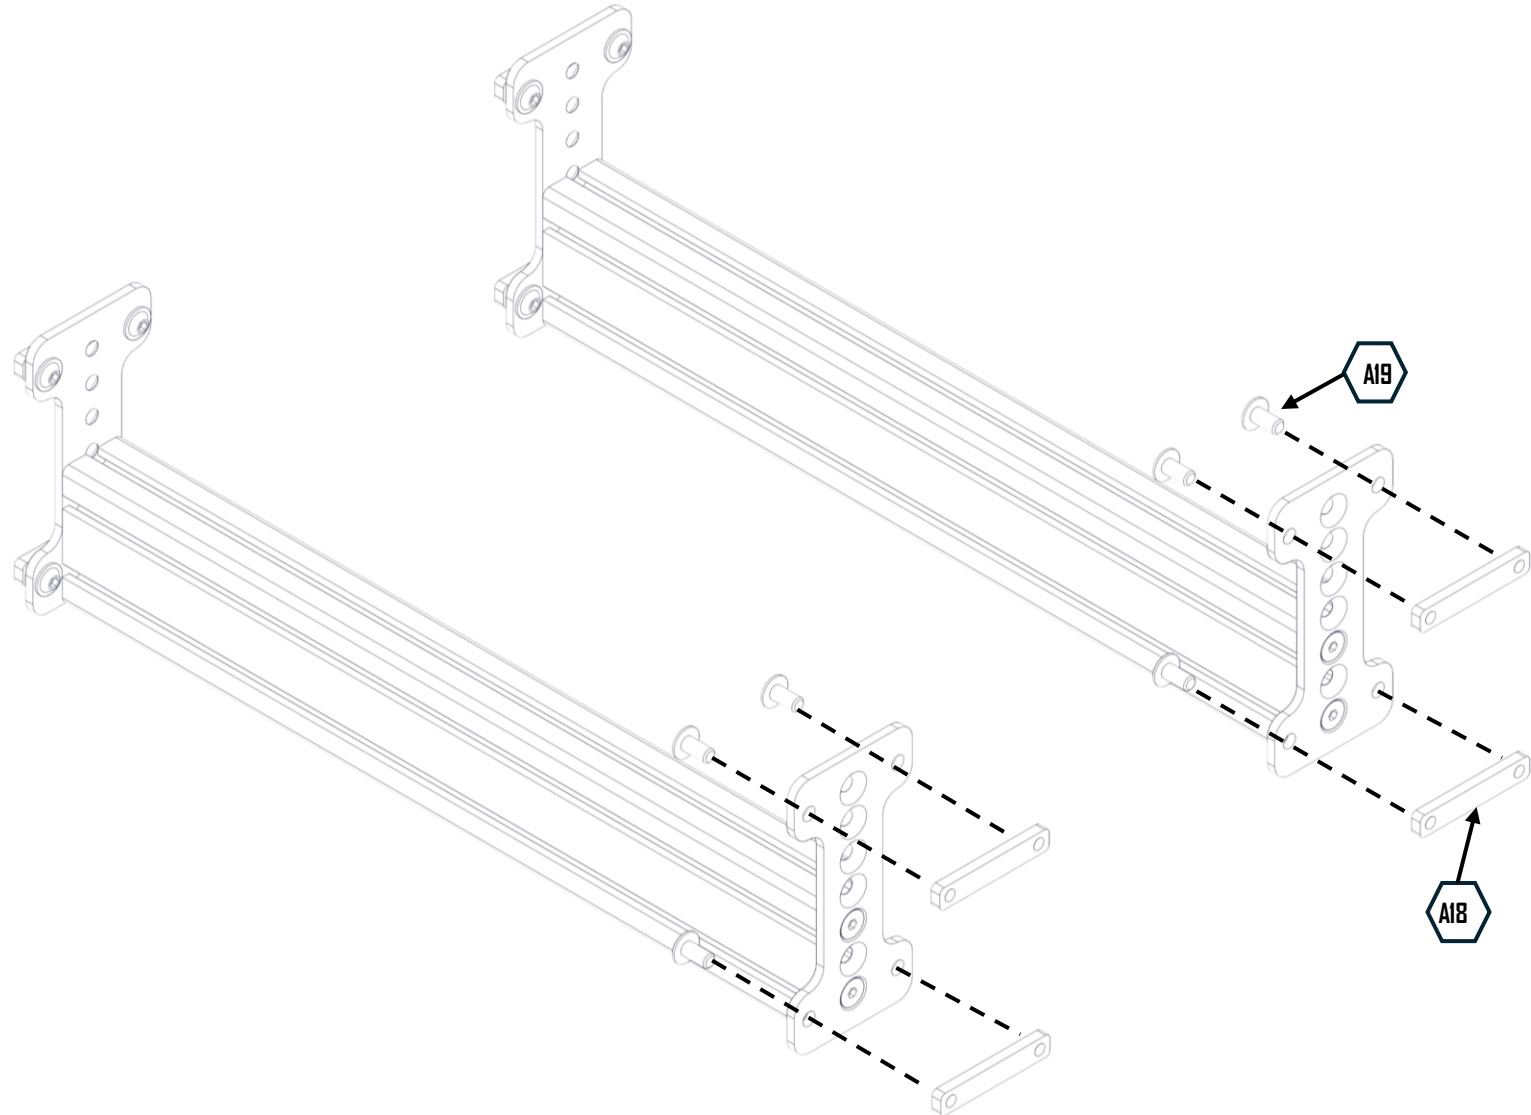

You can vary the seating height by choosing a different mounting position. This must be the same for all four plates.

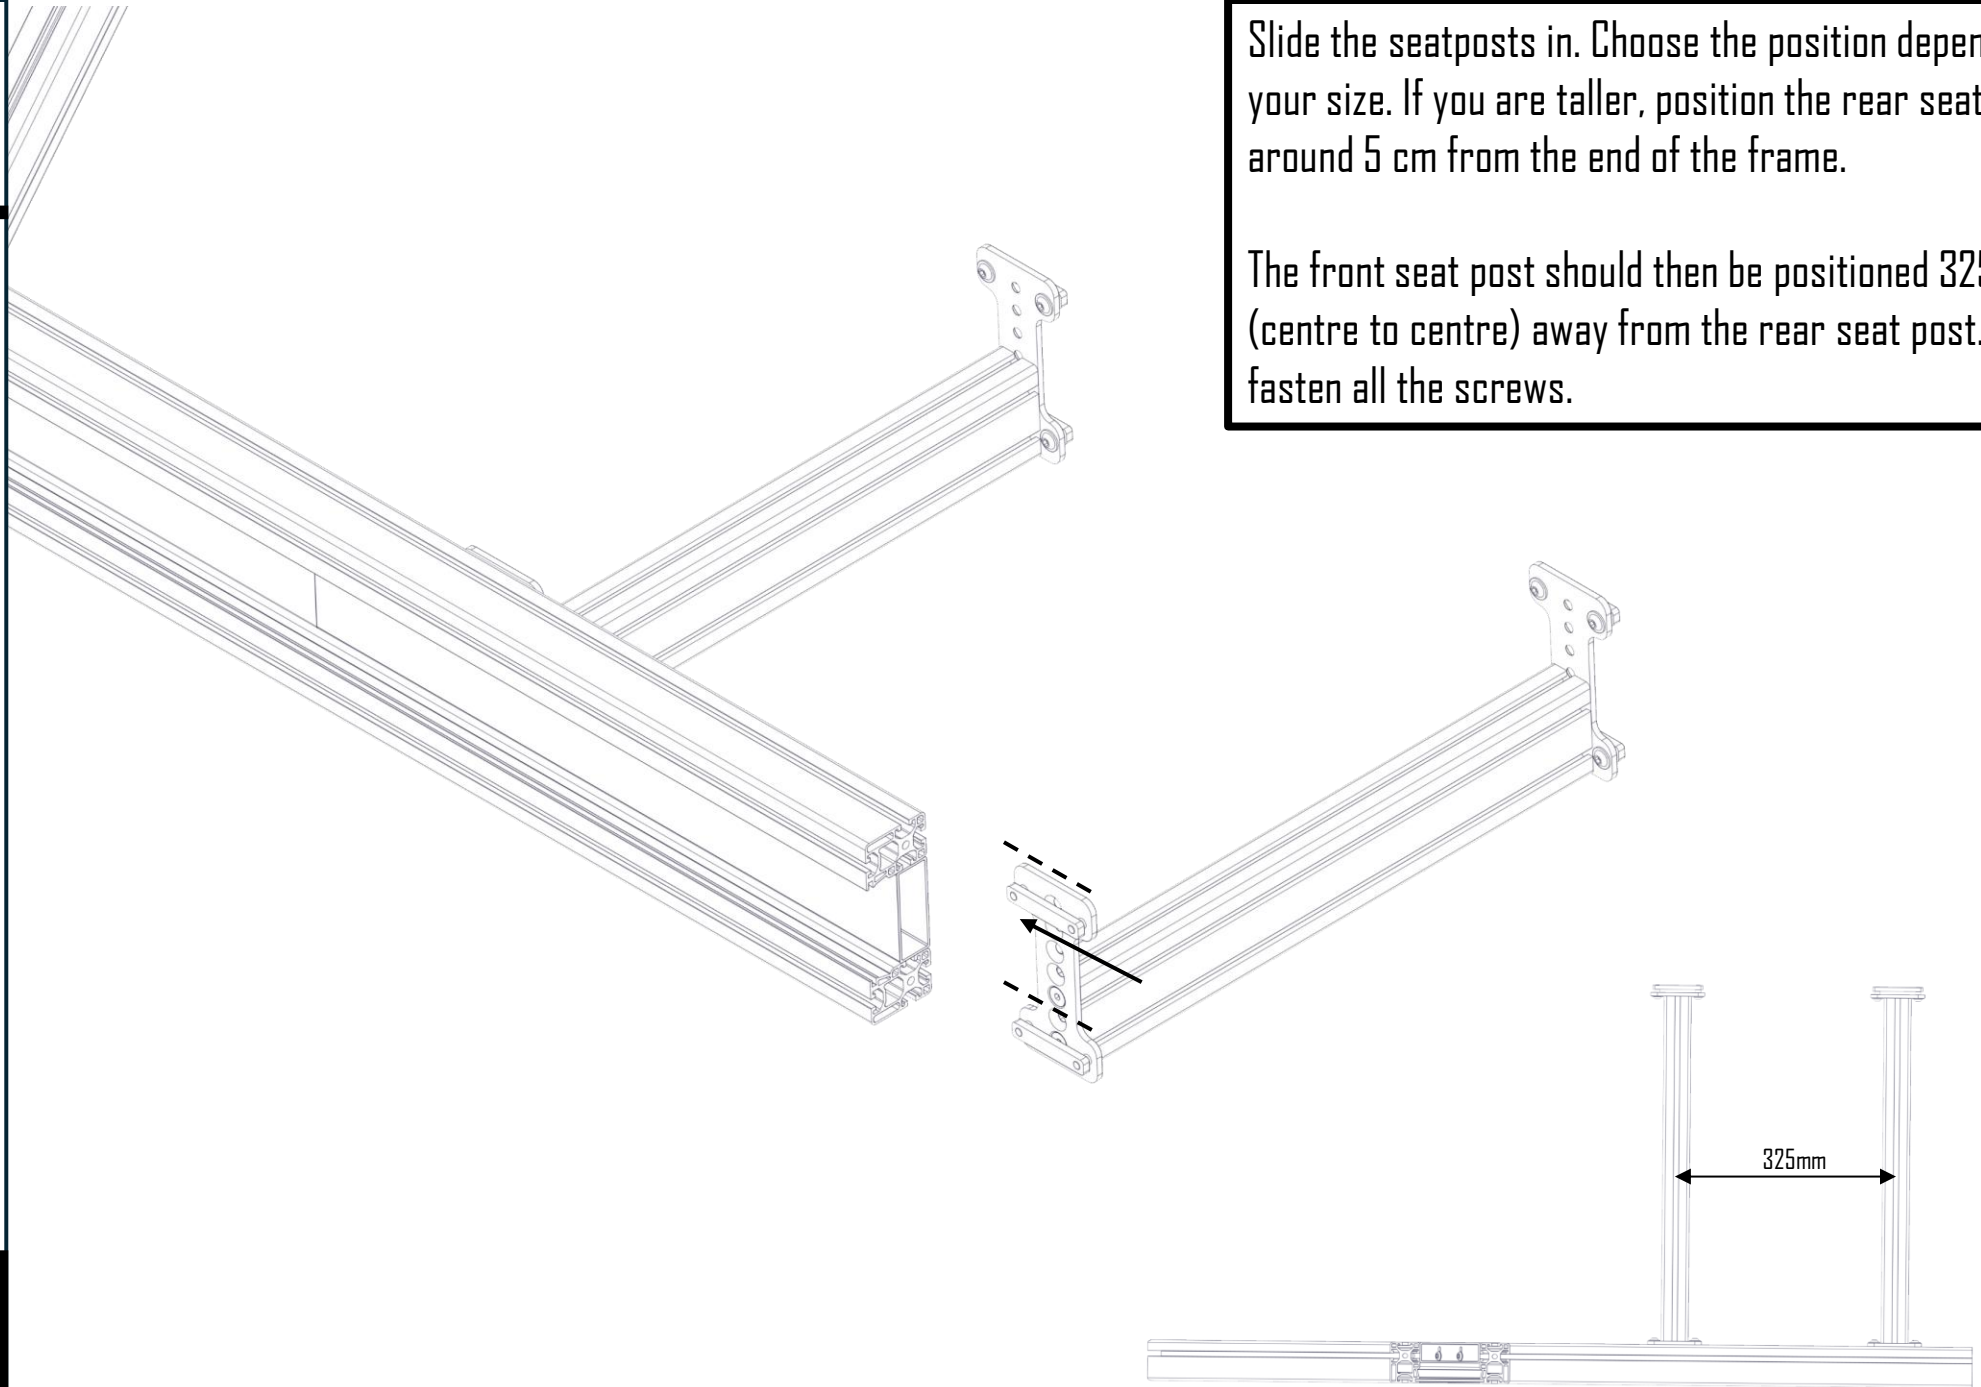

12 / 43

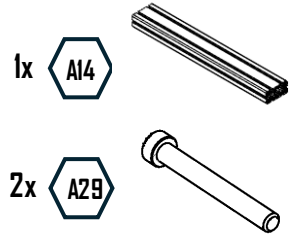

As with the frame parts, only tighten the die screws by one turn so that the complete unit can slide easily into the frame in step 10.

BASEFRAME

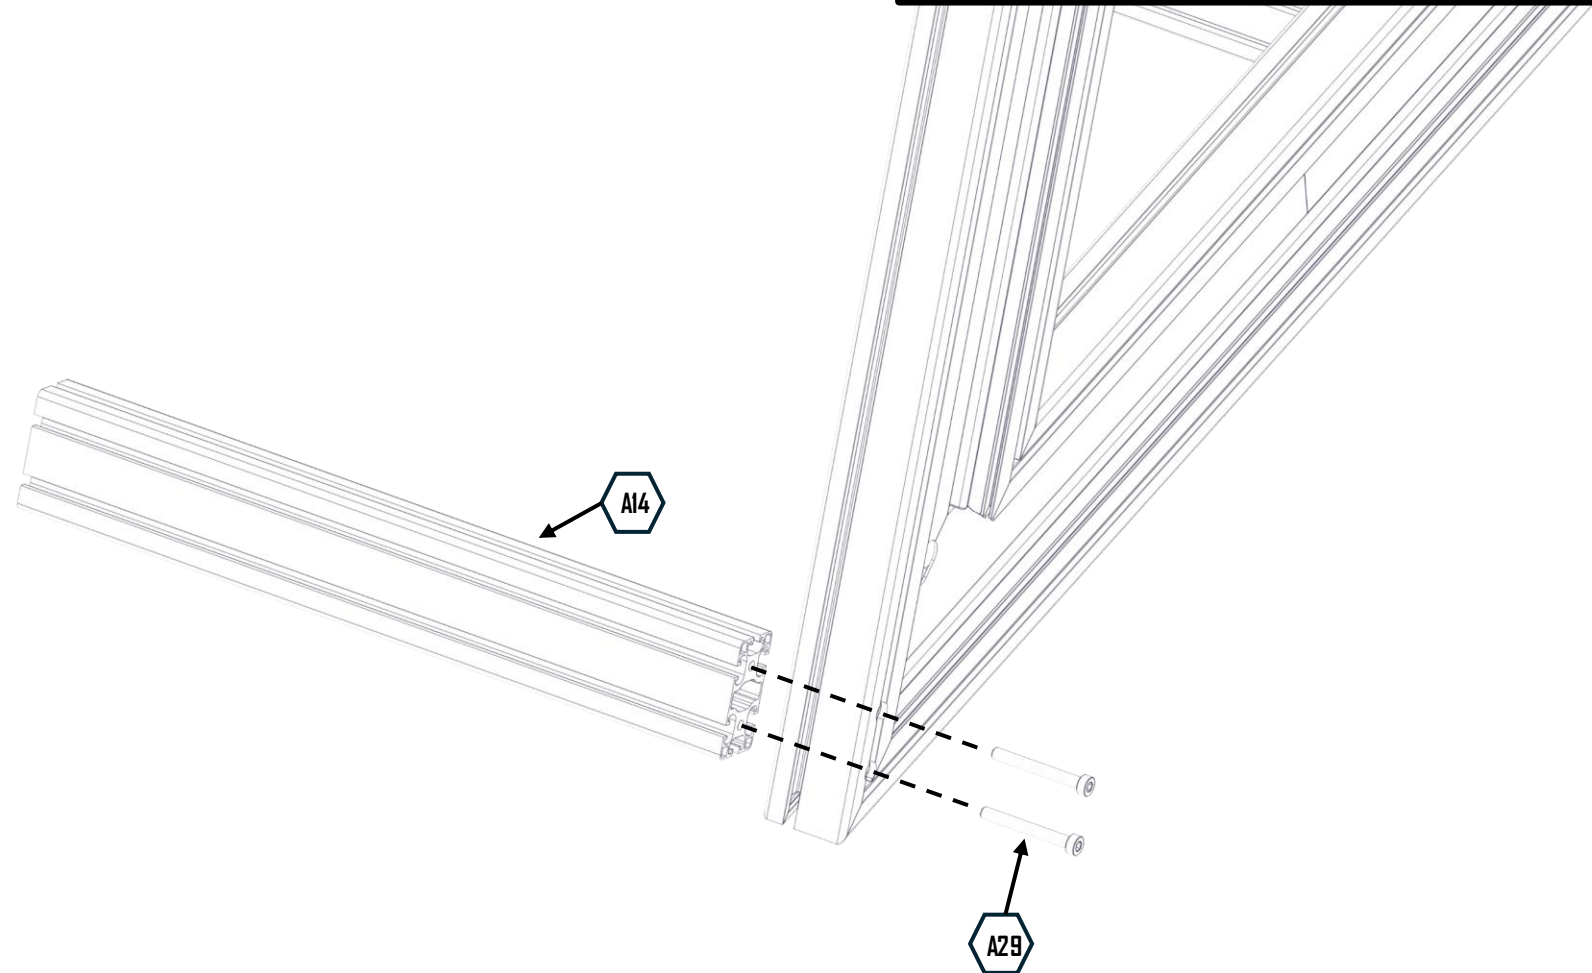

14 / 43

Connect the (A14) support bar with the (A29) M8x65 cylinder screws.

Do not tighten them now.

We will tighten them once the pedal unit has been mounted

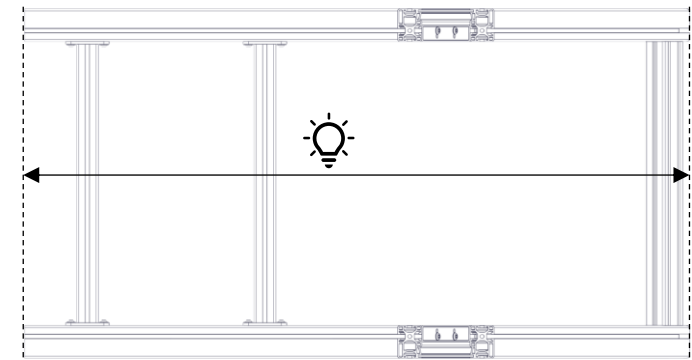

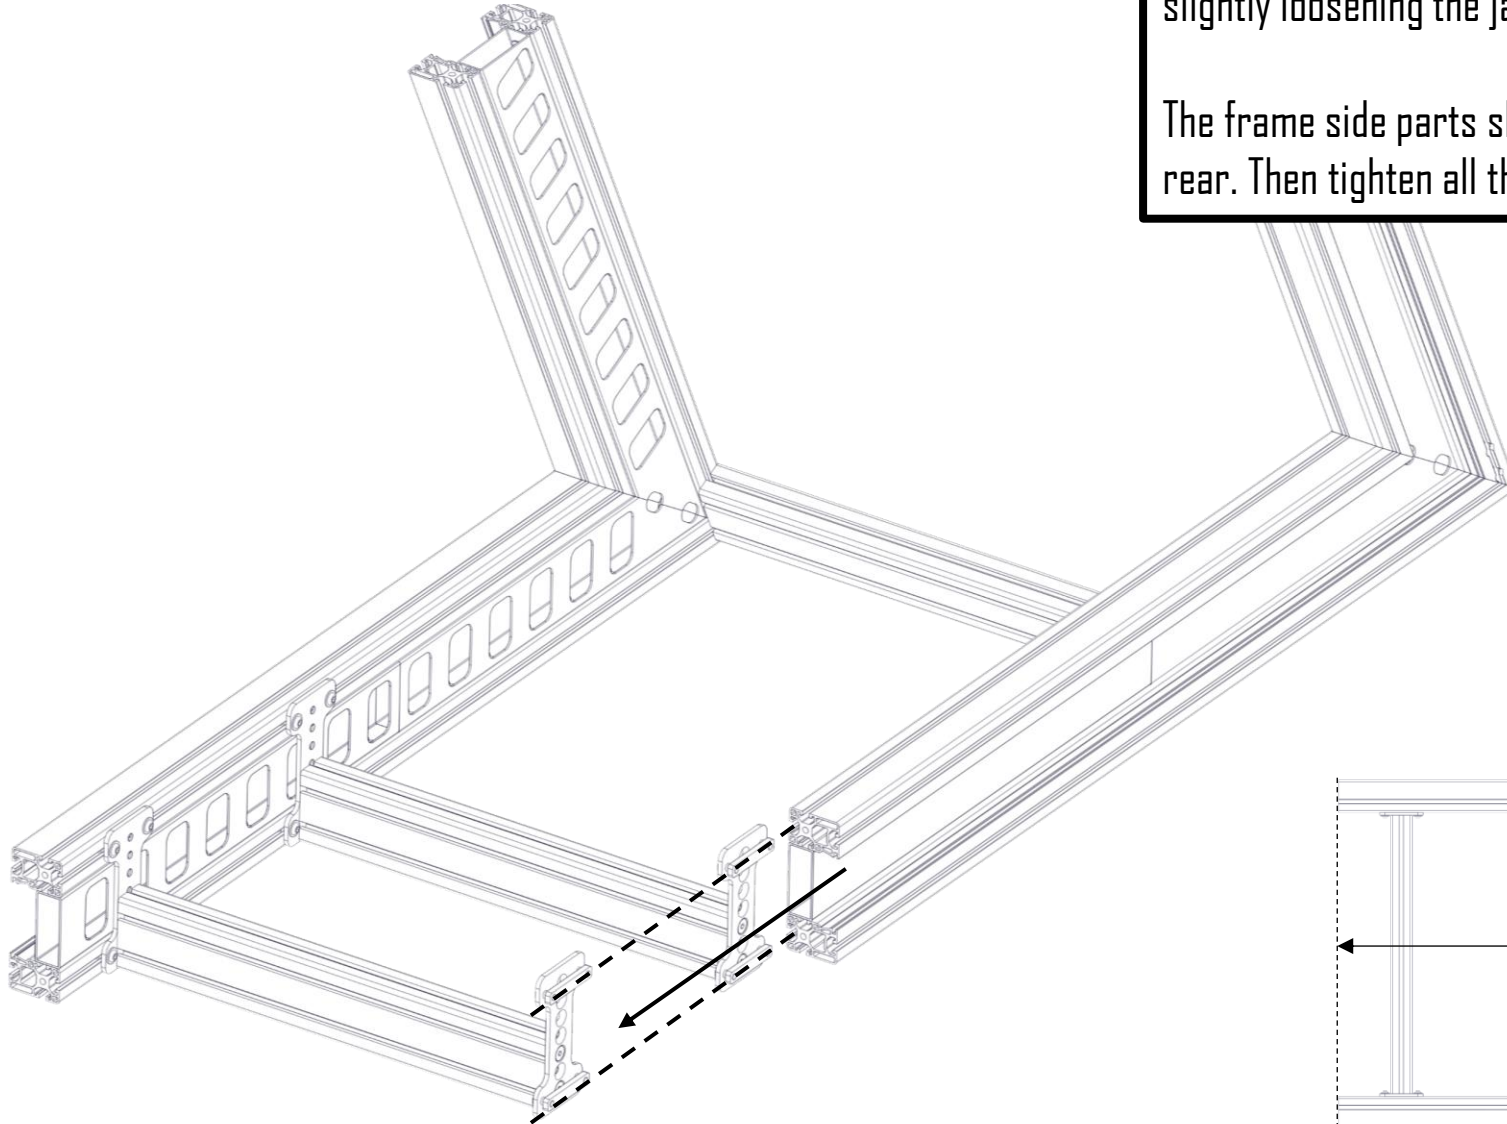

BASEFRAME

15 / 43

With the help of your working buddy, carefully slide the right frame part onto the other frame part.

As before, take your time and remove any blockages by slightly loosening the jammed T-nut

The frame side parts should be flush at the front and rear. Then tighten all the screws.

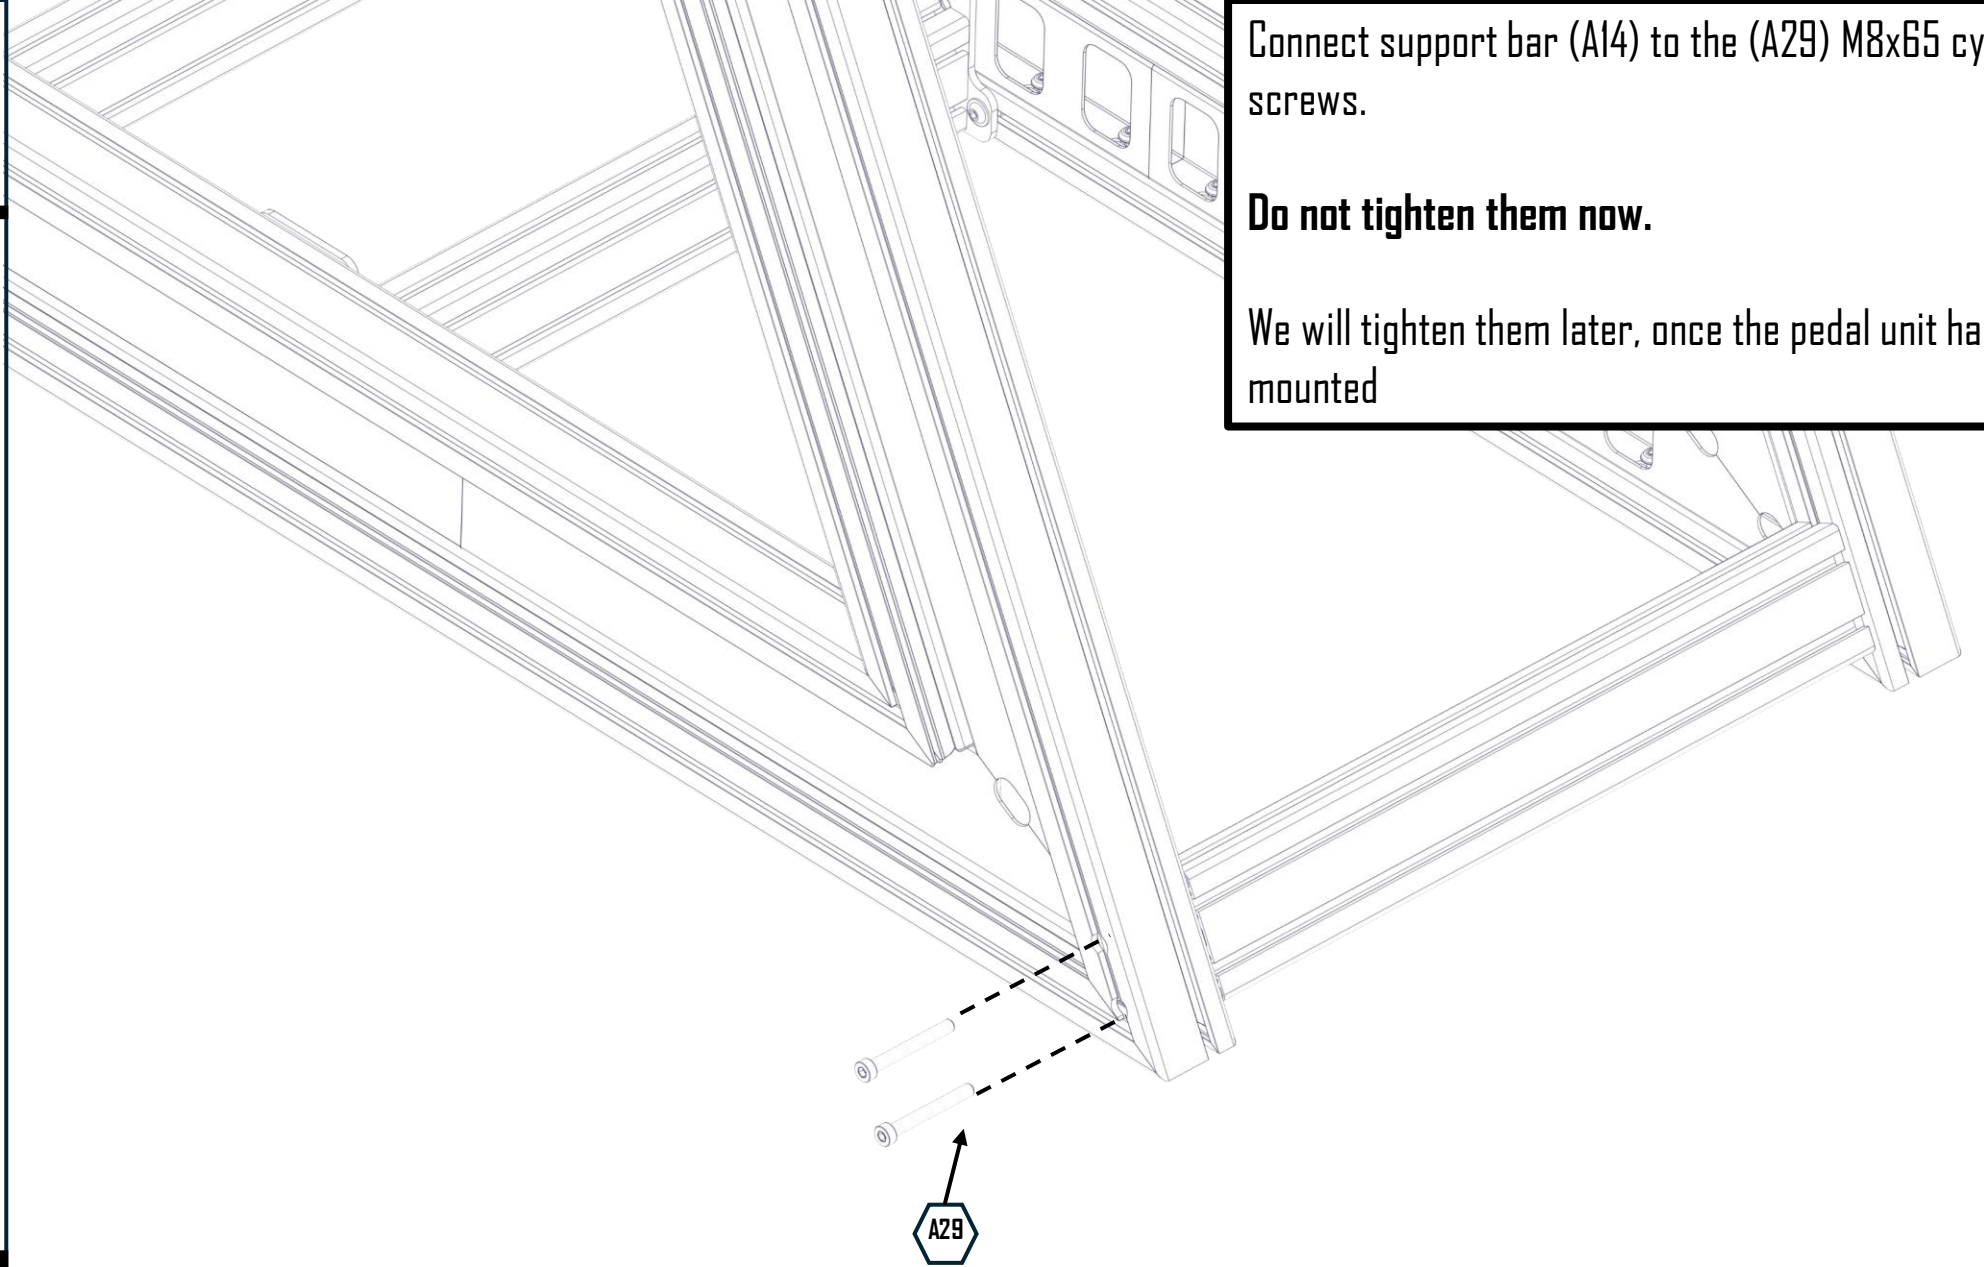

BASEFRAME

16 / 43

BASEFRAME

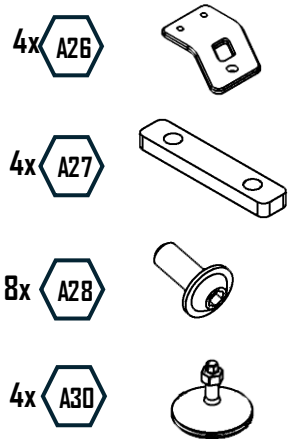

Connect support bar (A14) to the (A29) M8x65 cylinder screws.

Do not tighten them now.

We will tighten them later, once the pedal unit has been mounted

17 / 43

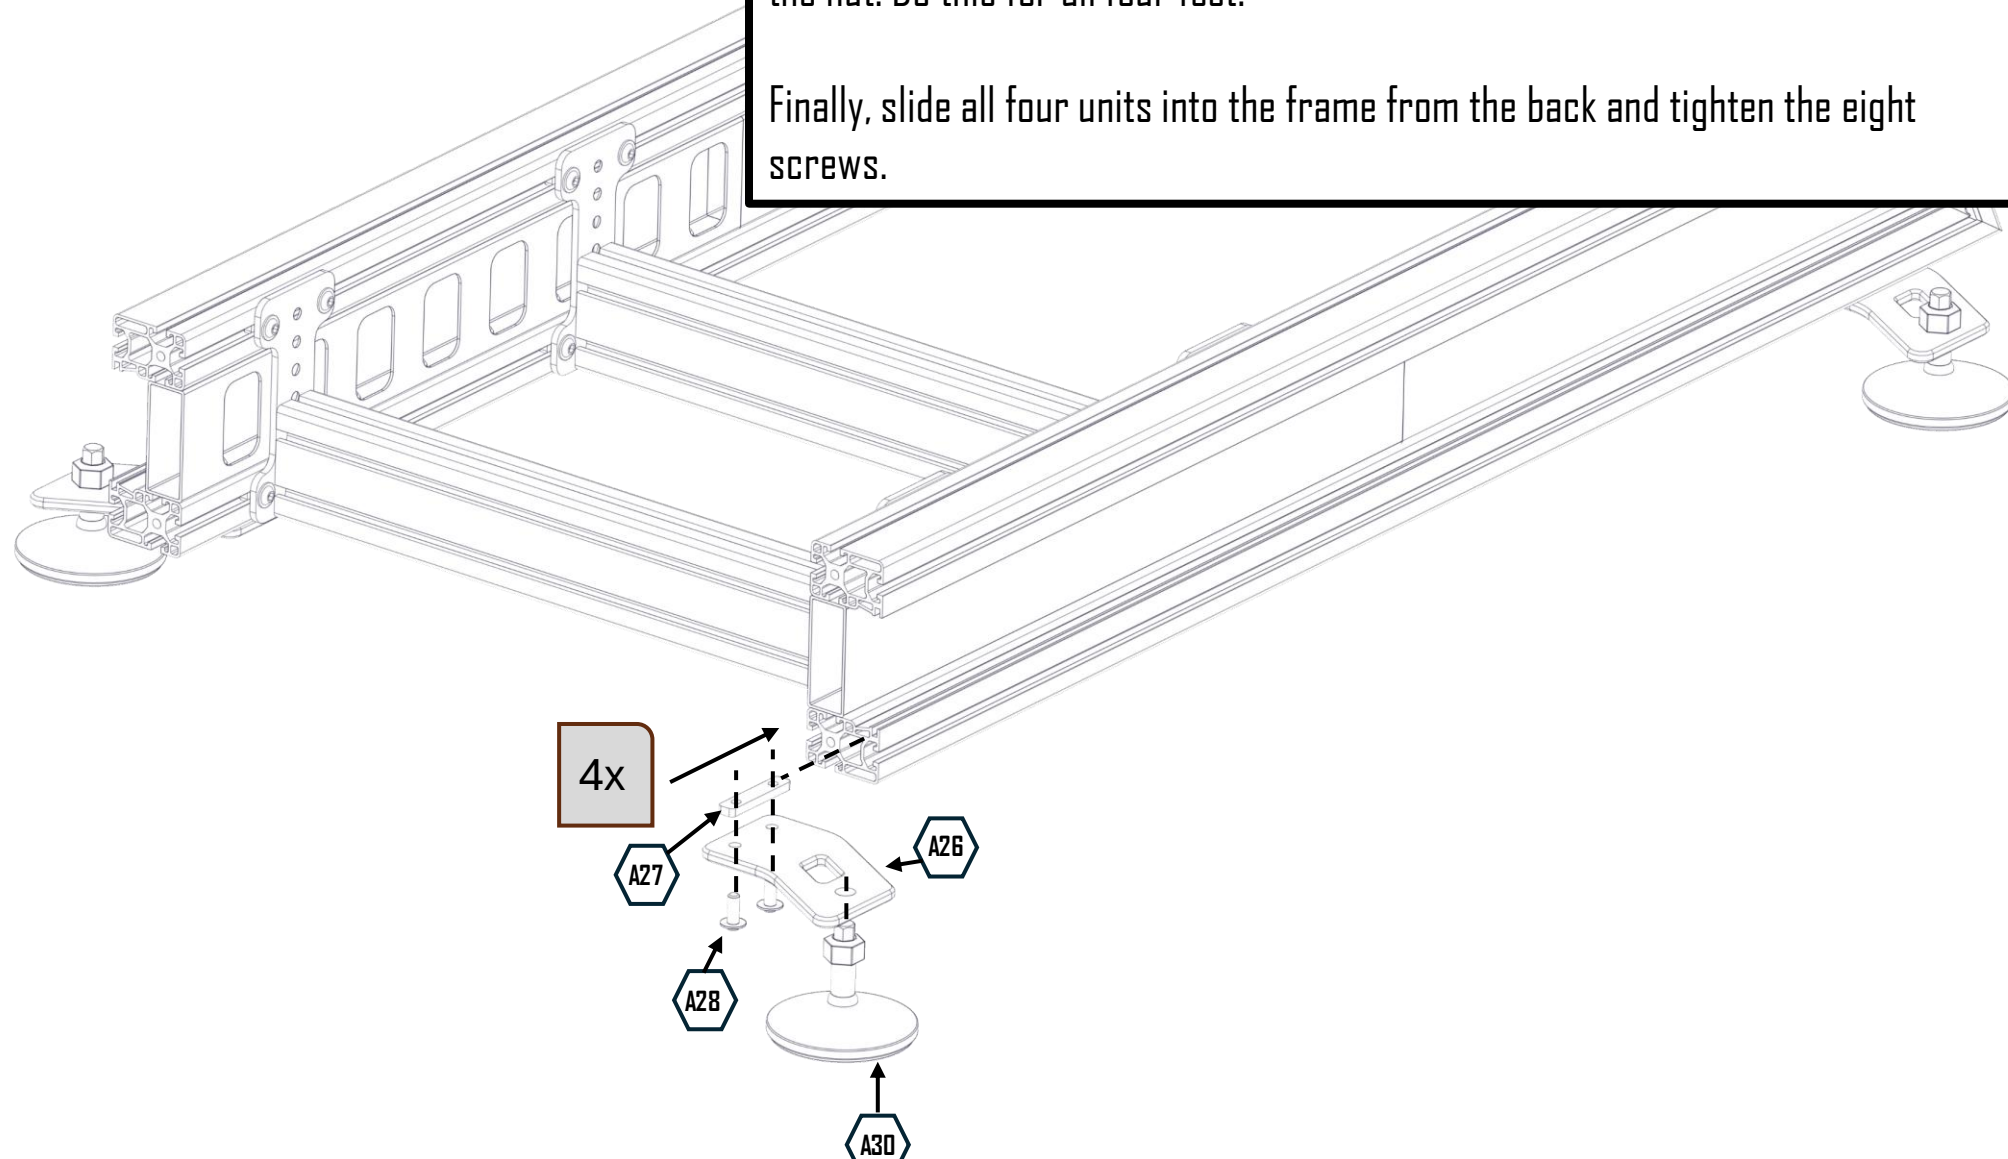

BASEFRAME

Attach the four feet to the foot plates using A28 M8x20 screws and T-nuts. Insert screws only one turn so they can slide into the frame.

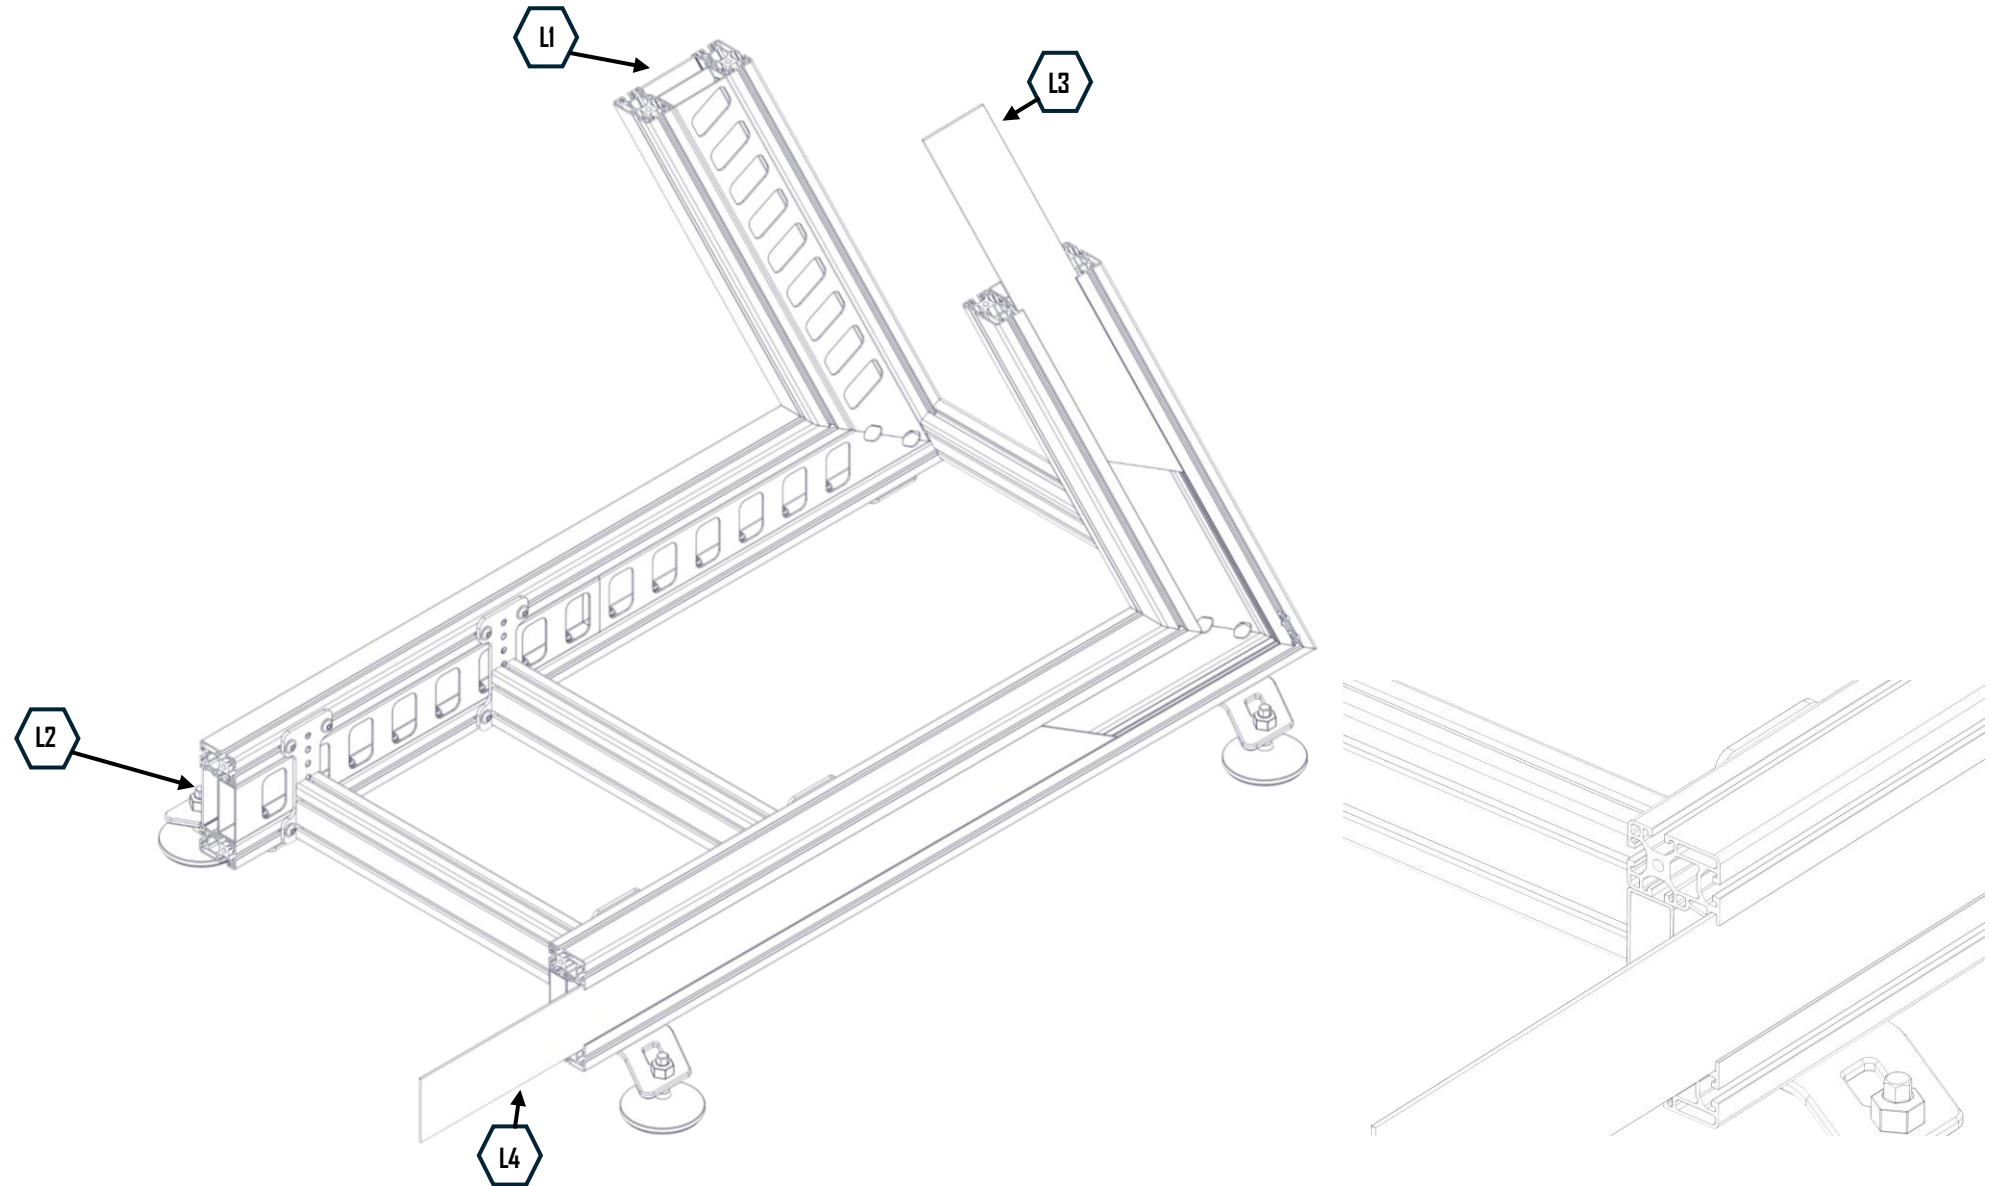

Remove the nut, guide the foot through the foot plate, then secure it again with the nut. Do this for all four feet.

Finally, slide all four units into the frame from the back and tighten the eight screws.

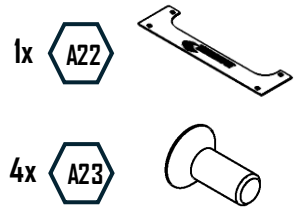

1x  L11x  L21x  L31x  L4

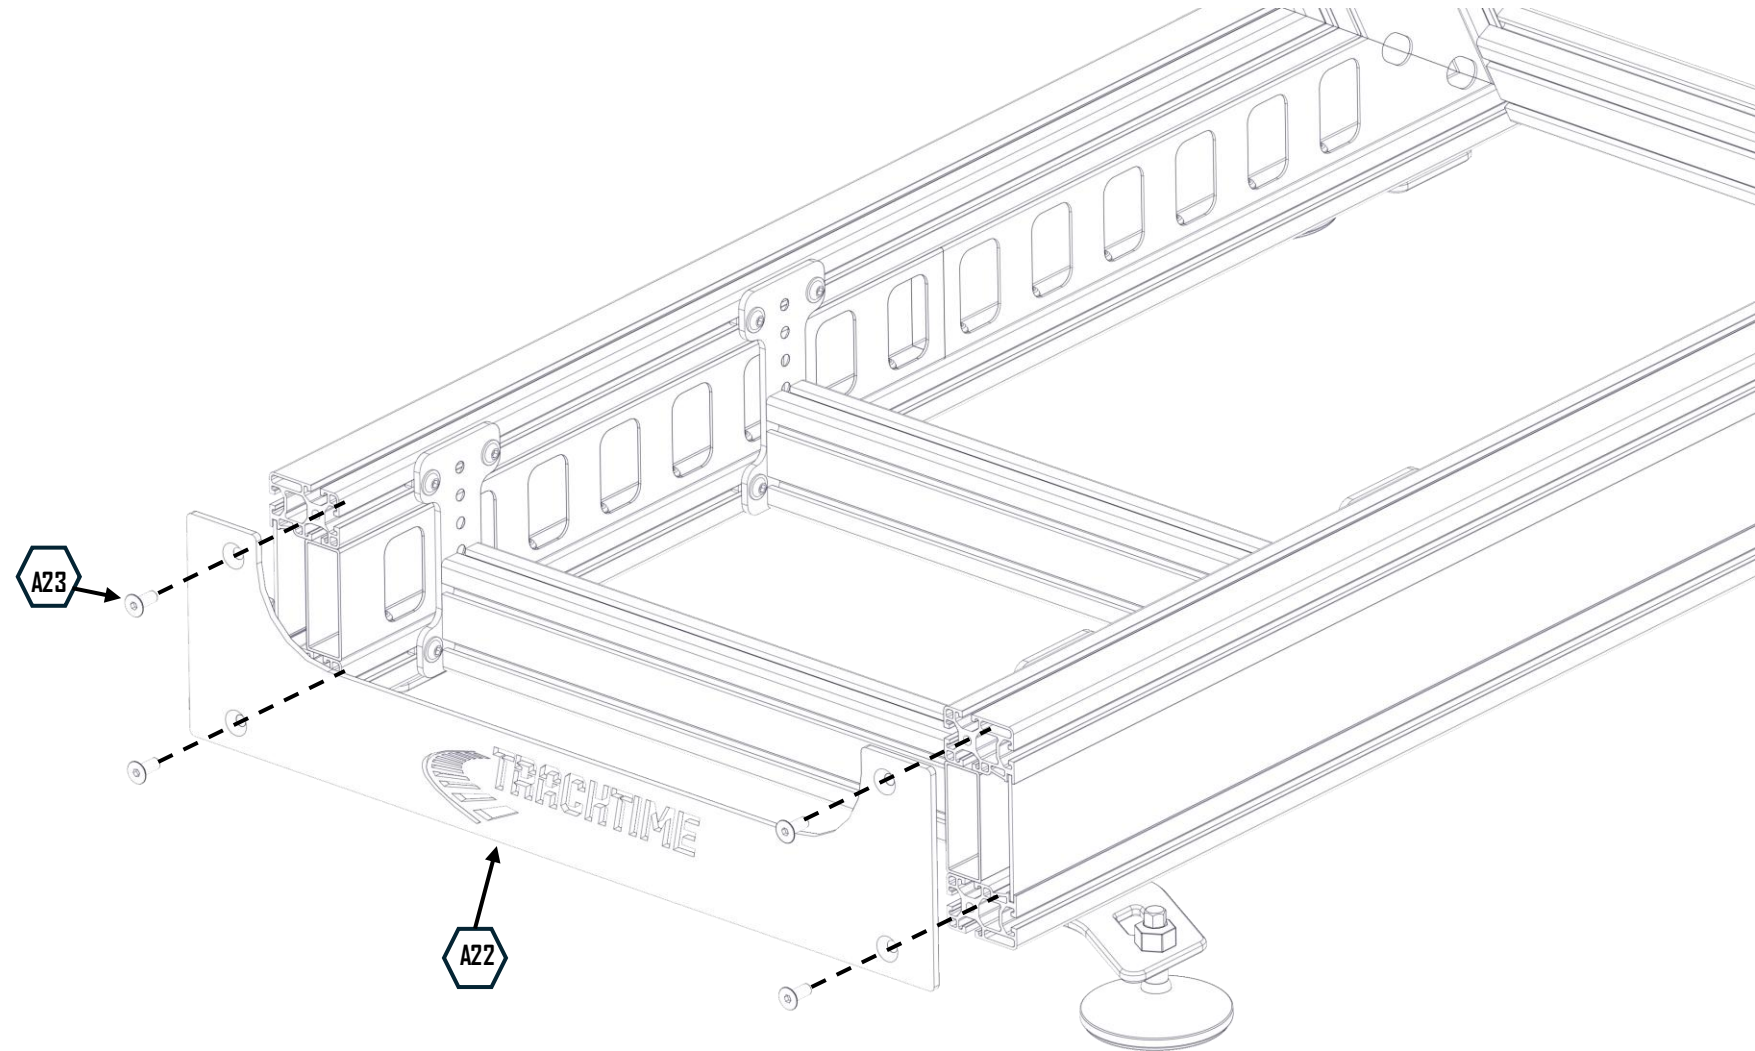

Slide all four covers (transparent or featuring a design) into the aluminium extrusions.

19 / 43

Mount the rear plate using the four (A23) M8x20 countersunk screws.

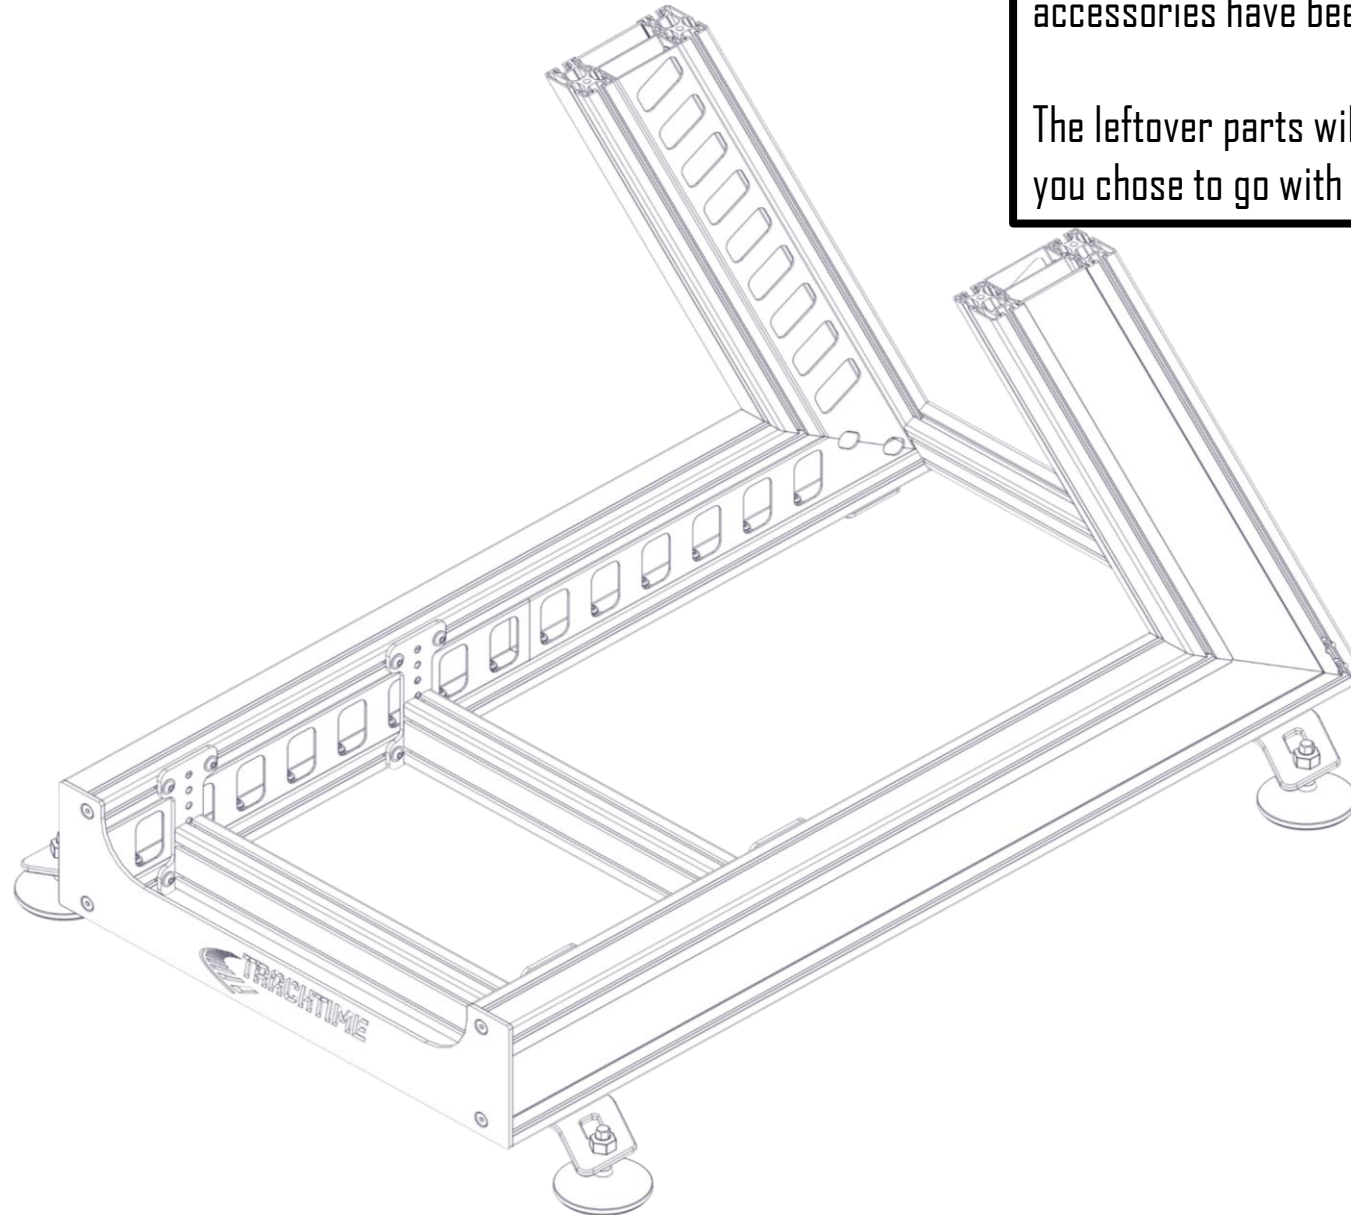

BASEFRAME

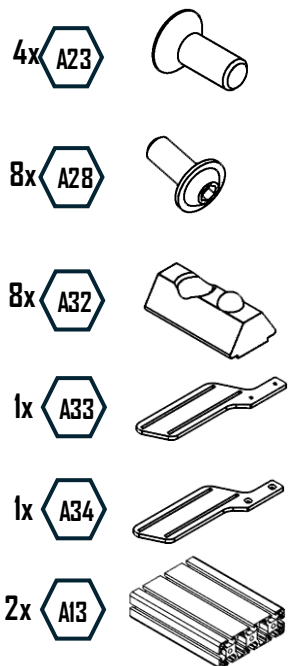

You have finished your new base frame.

We will install the upper end caps later, once all the accessories have been installed.

The leftover parts will be used for the wheel holder that you chose to go with your rig.

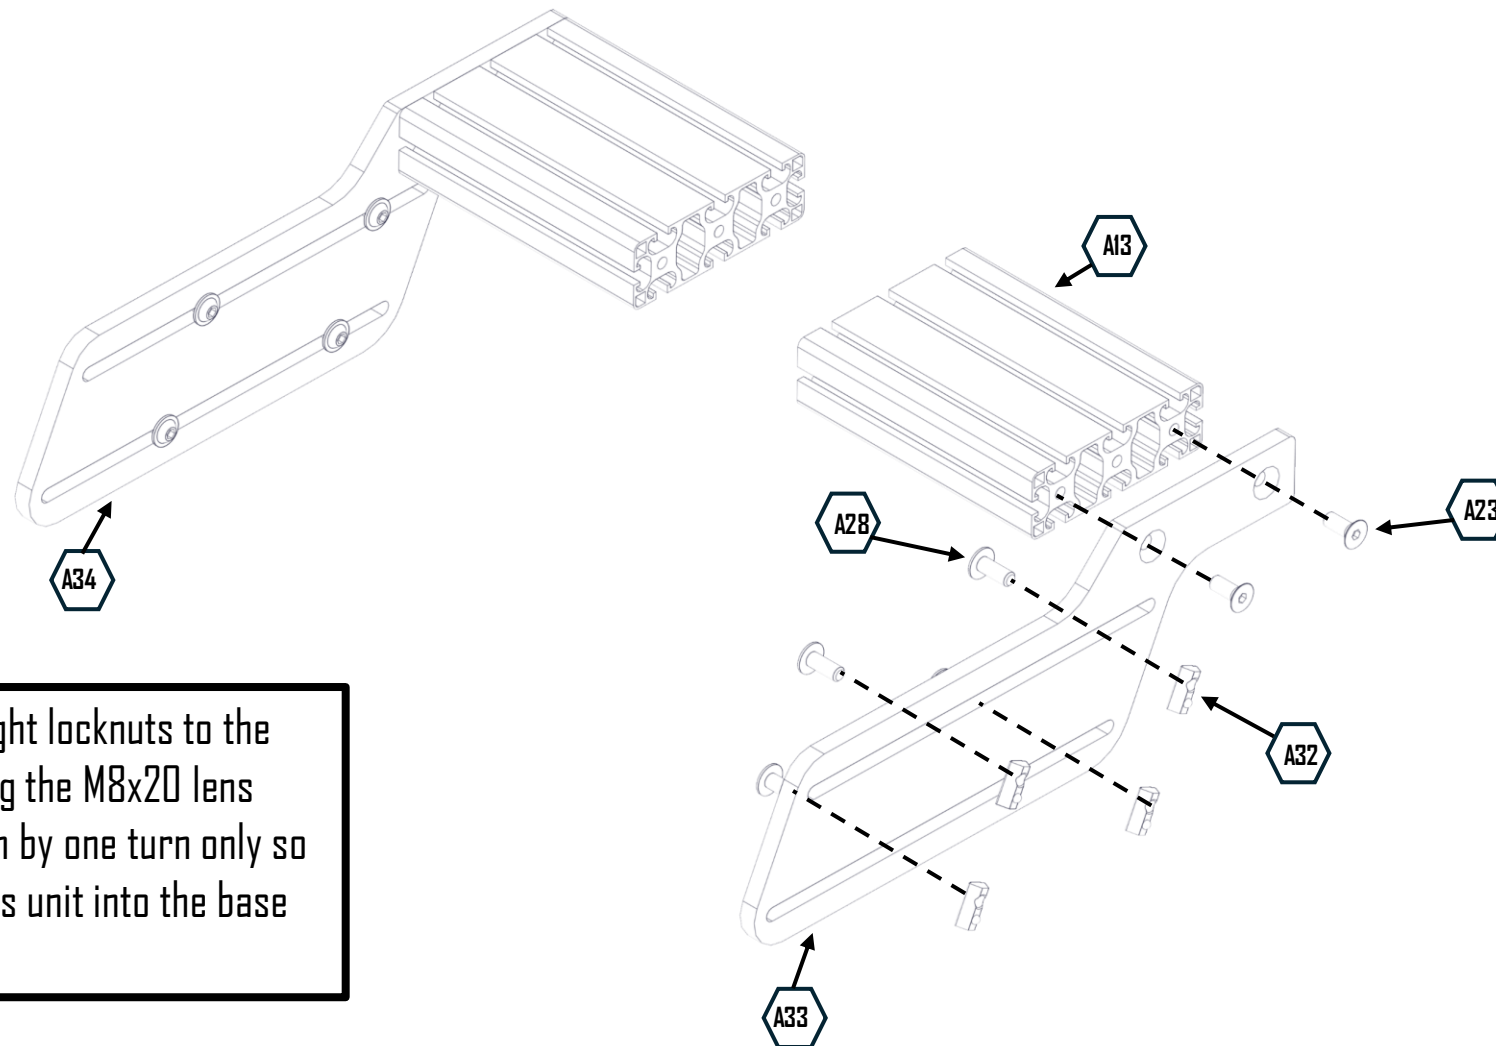

21 / 43

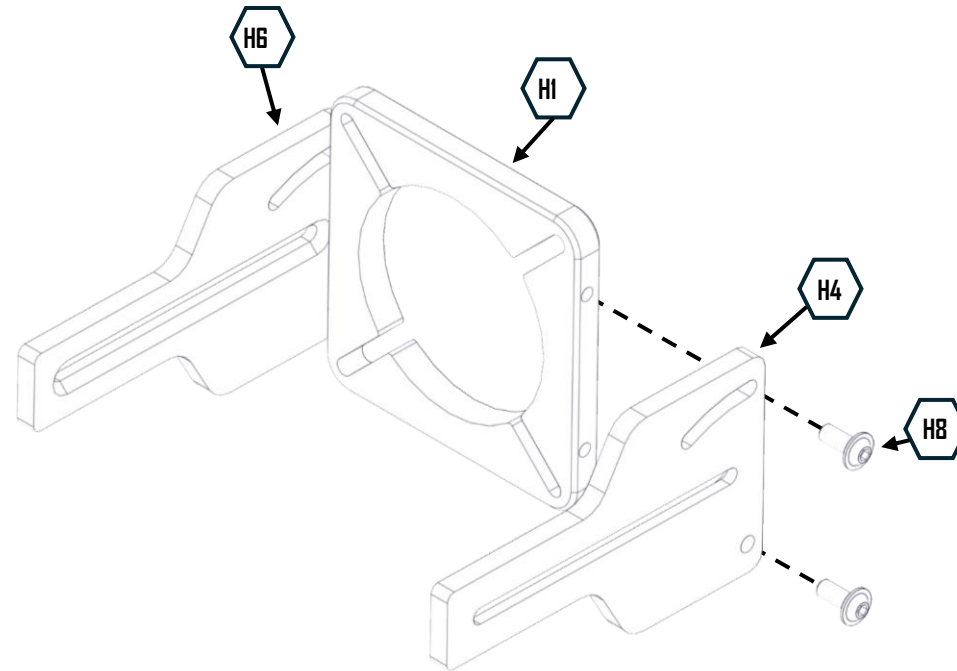

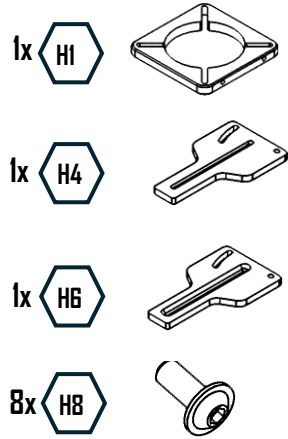

WHEEL UNIT (BASEFRAME PARTS)

First, connect the left and right wheel brackets to the 120 x 40 aluminium extrusions. Use the (A23) M8x20 countersunk screws.

Then connect the eight locknuts to the wheel brackets using the M8x20 lens screws. Fasten them by one turn only so that we can slide this unit into the base frame later.

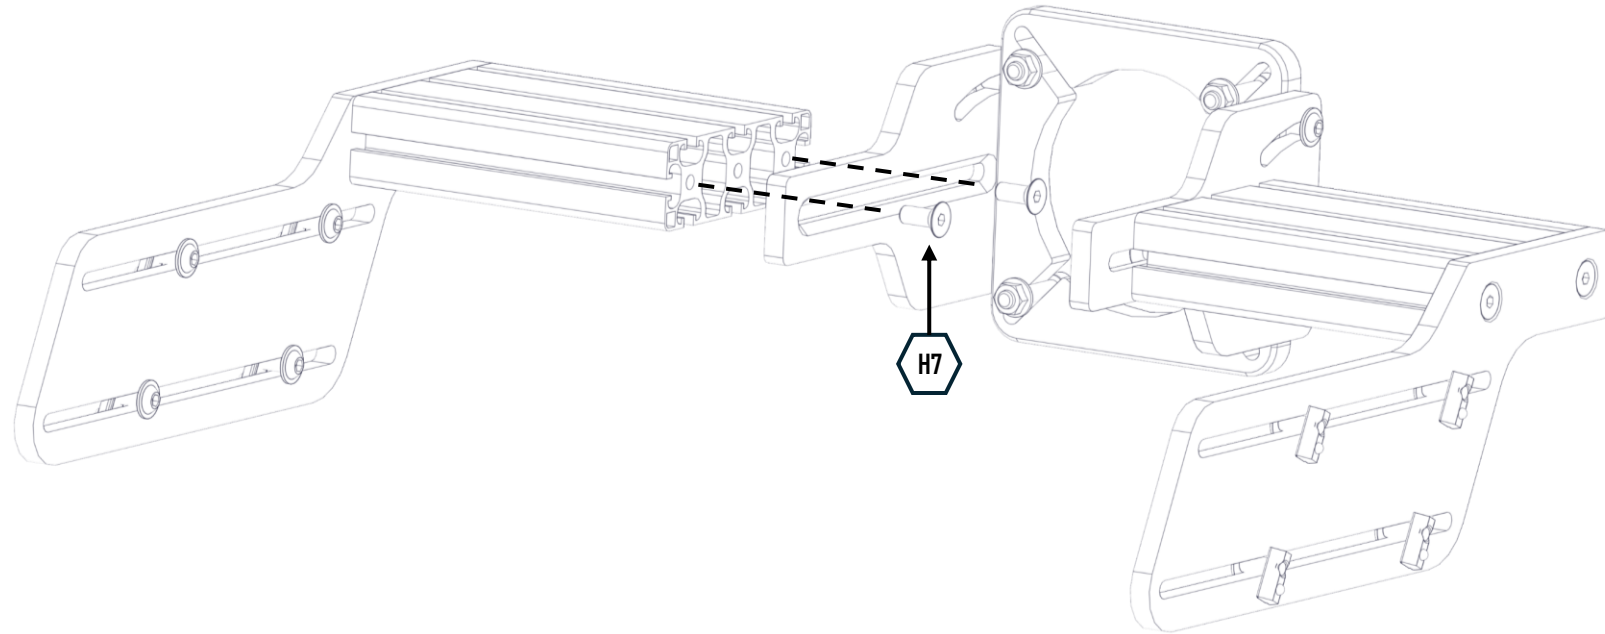

Connect the front faceplate to the left and right wheel brackets.
Use the (H8) M8-20 screws. For now, adjust the wheelplate to an upright position.

23 / 43

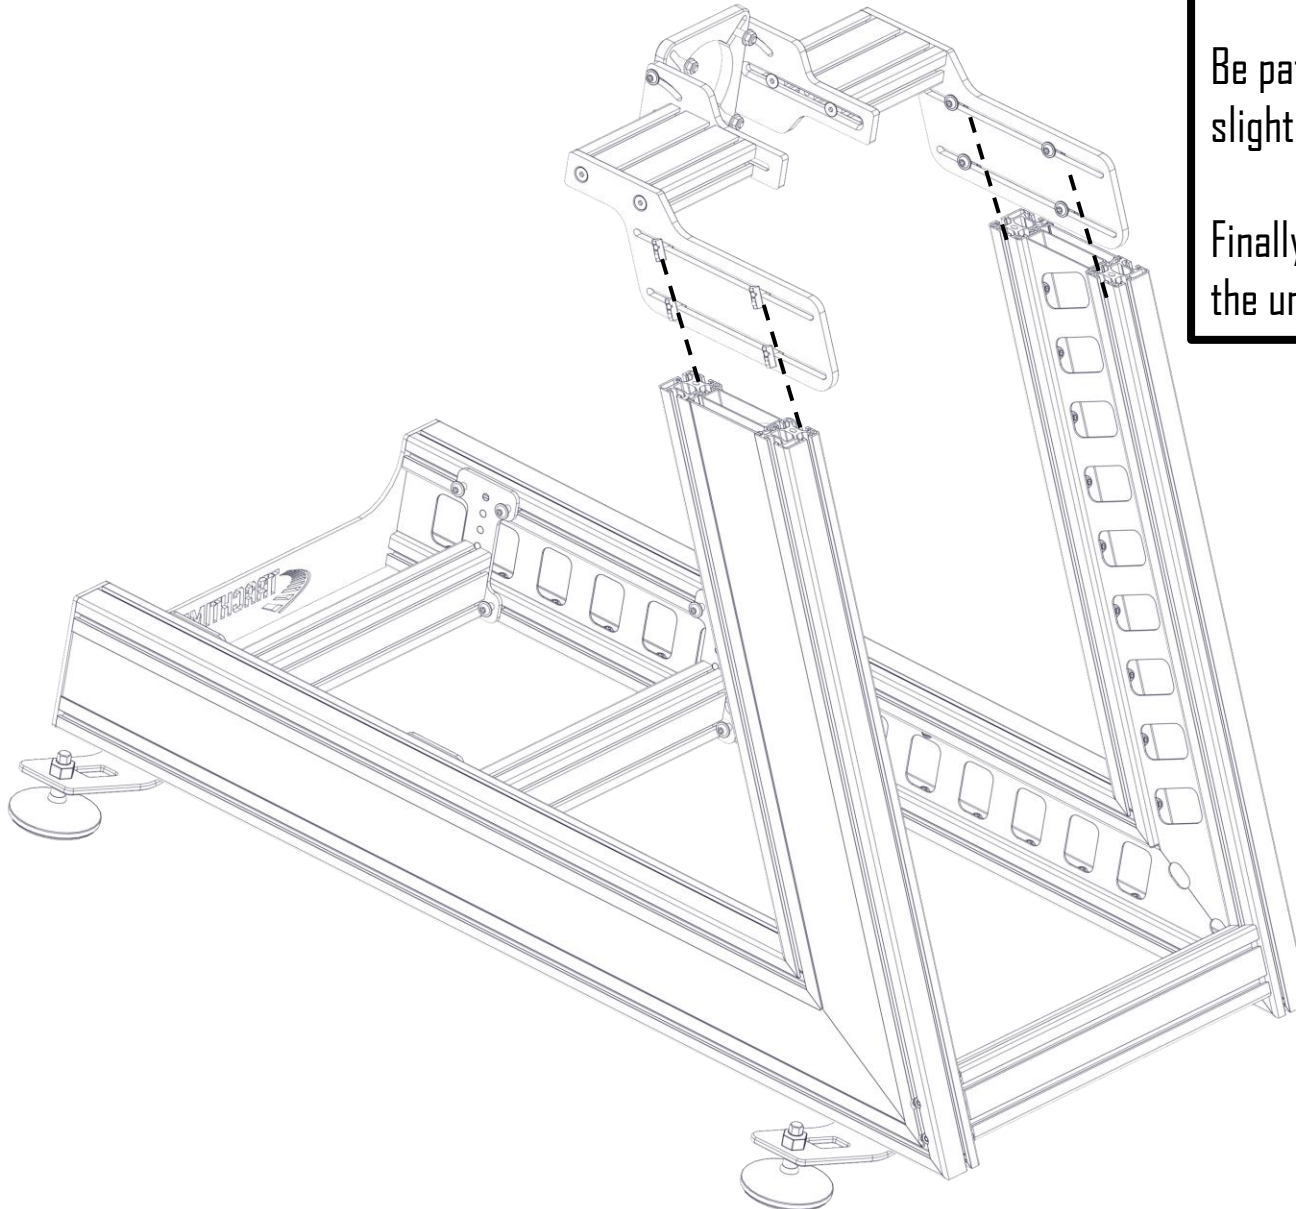

Connect the pre-mounted base frame wheel units (left and right) to the newly mounted front mount wheel unit using four (H7) M8x20 lens screws.

For now, adjust both sides to the frontmost position to make mounting to the baseframe easier.

**WHEEL UNIT
(FRONTMOUNT
SOLUTION)**

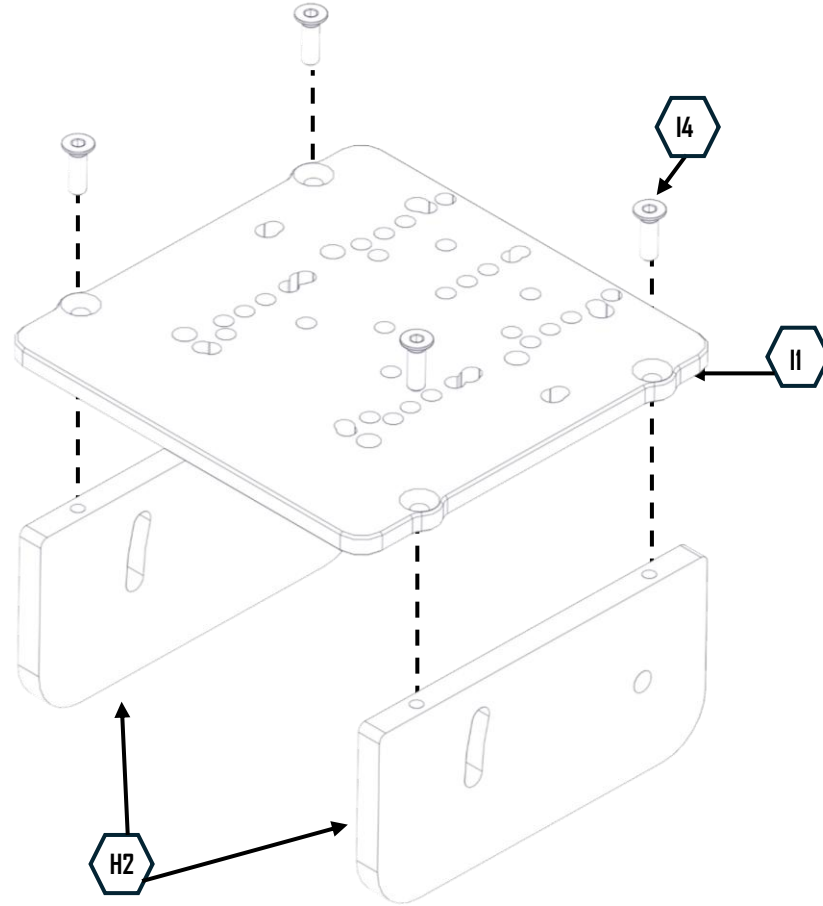

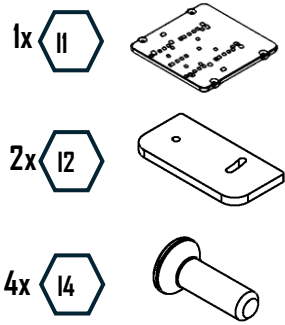

It is better to do this with another person. Mount the wheel unit to the base frame by sliding the T-nuts into the frame.

Be patient and take care. As before, if a T-nut gets stuck, slightly loosen the screw.

Finally, fasten all eight screws once you have positioned the unit in the desired position.

25 / 43

Connect the wheel plate and both wheel brackets. Use four of the (I4) M6x20 countersunk screws.

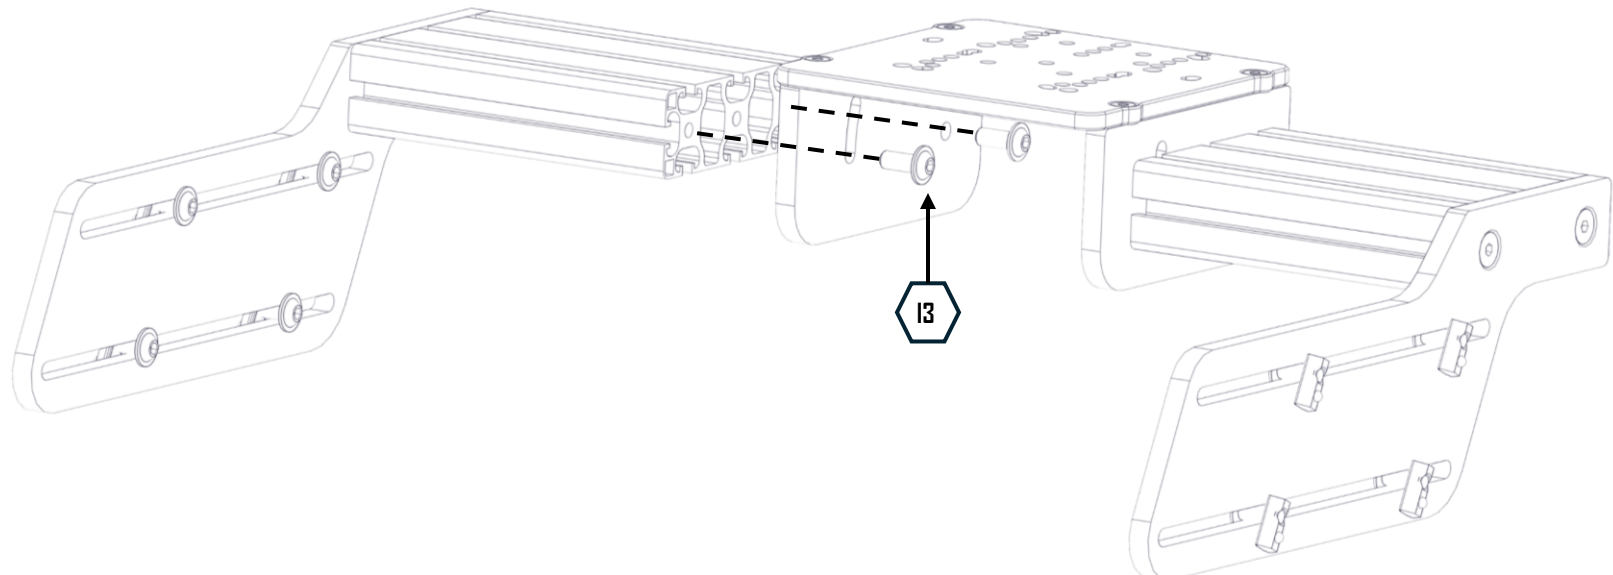

**WHEEL UNIT
(TOPMOUNT SOLUTION)**

26 / 43

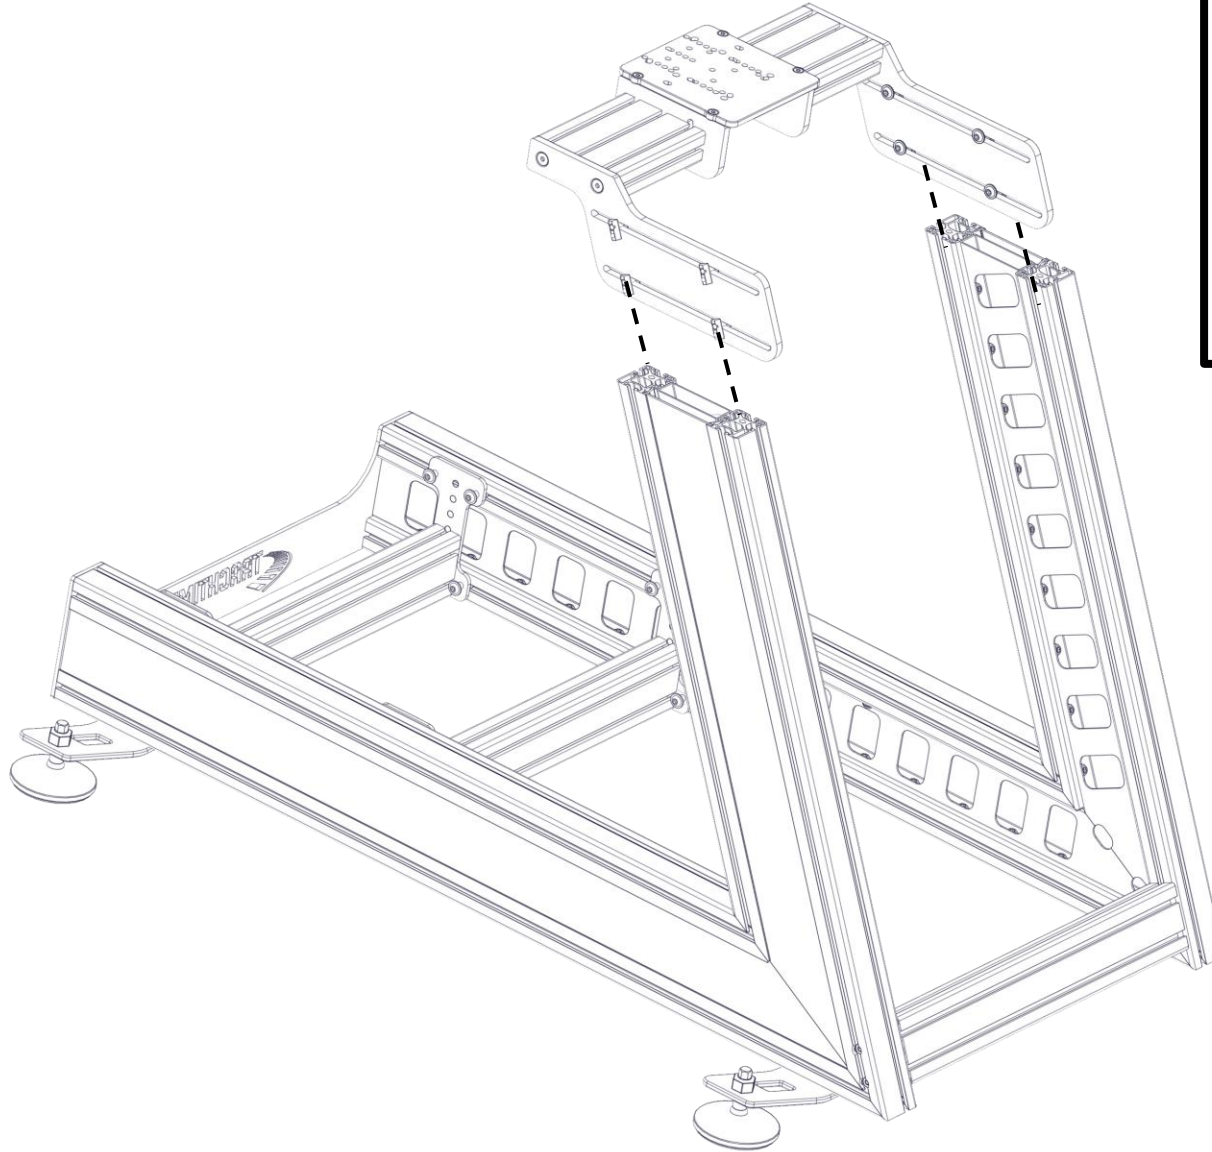

Connect the pre-mounted base frame wheel units (left and right) to the newly mounted top mount wheel unit using four (13) M8x20 lens screws.

For now, ensure that both sides are 100% straight to make mounting to the baseframe easier.

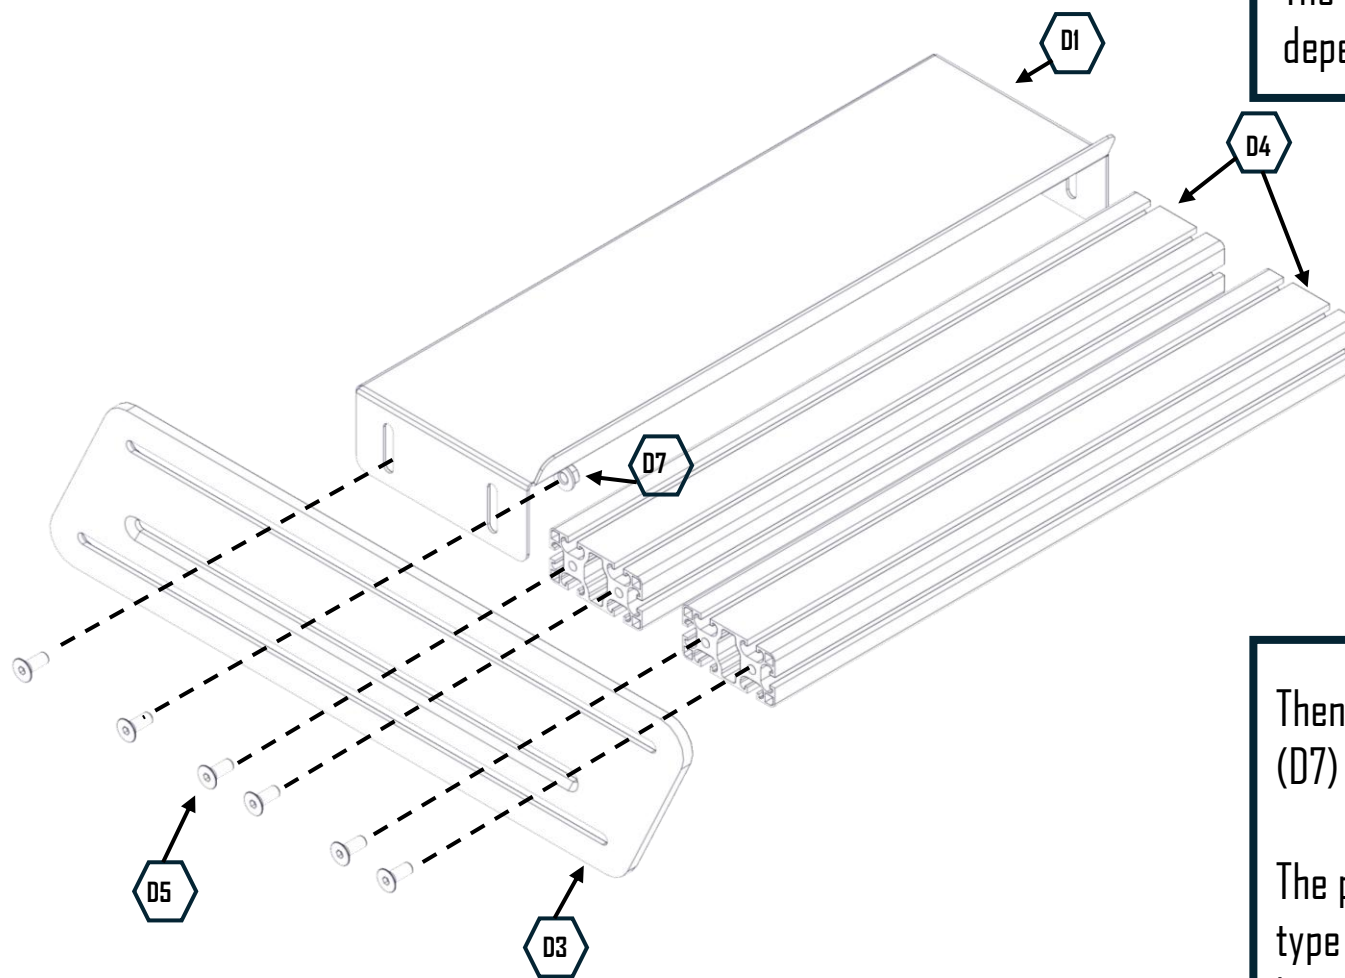

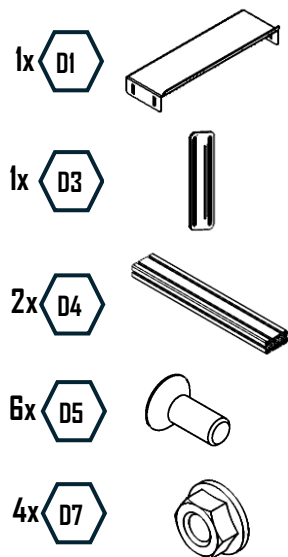

**WHEEL UNIT
(TOPMOUNT SOLUTION)**

It is better to do this with another person. Mount the wheel unit to the base frame by sliding the T-nuts into the frame.

Be patient and take care. As before, if a T-nut gets stuck, slightly loosen the screw.

Finally, secure all eight screws once you have positioned the unit in the desired position.

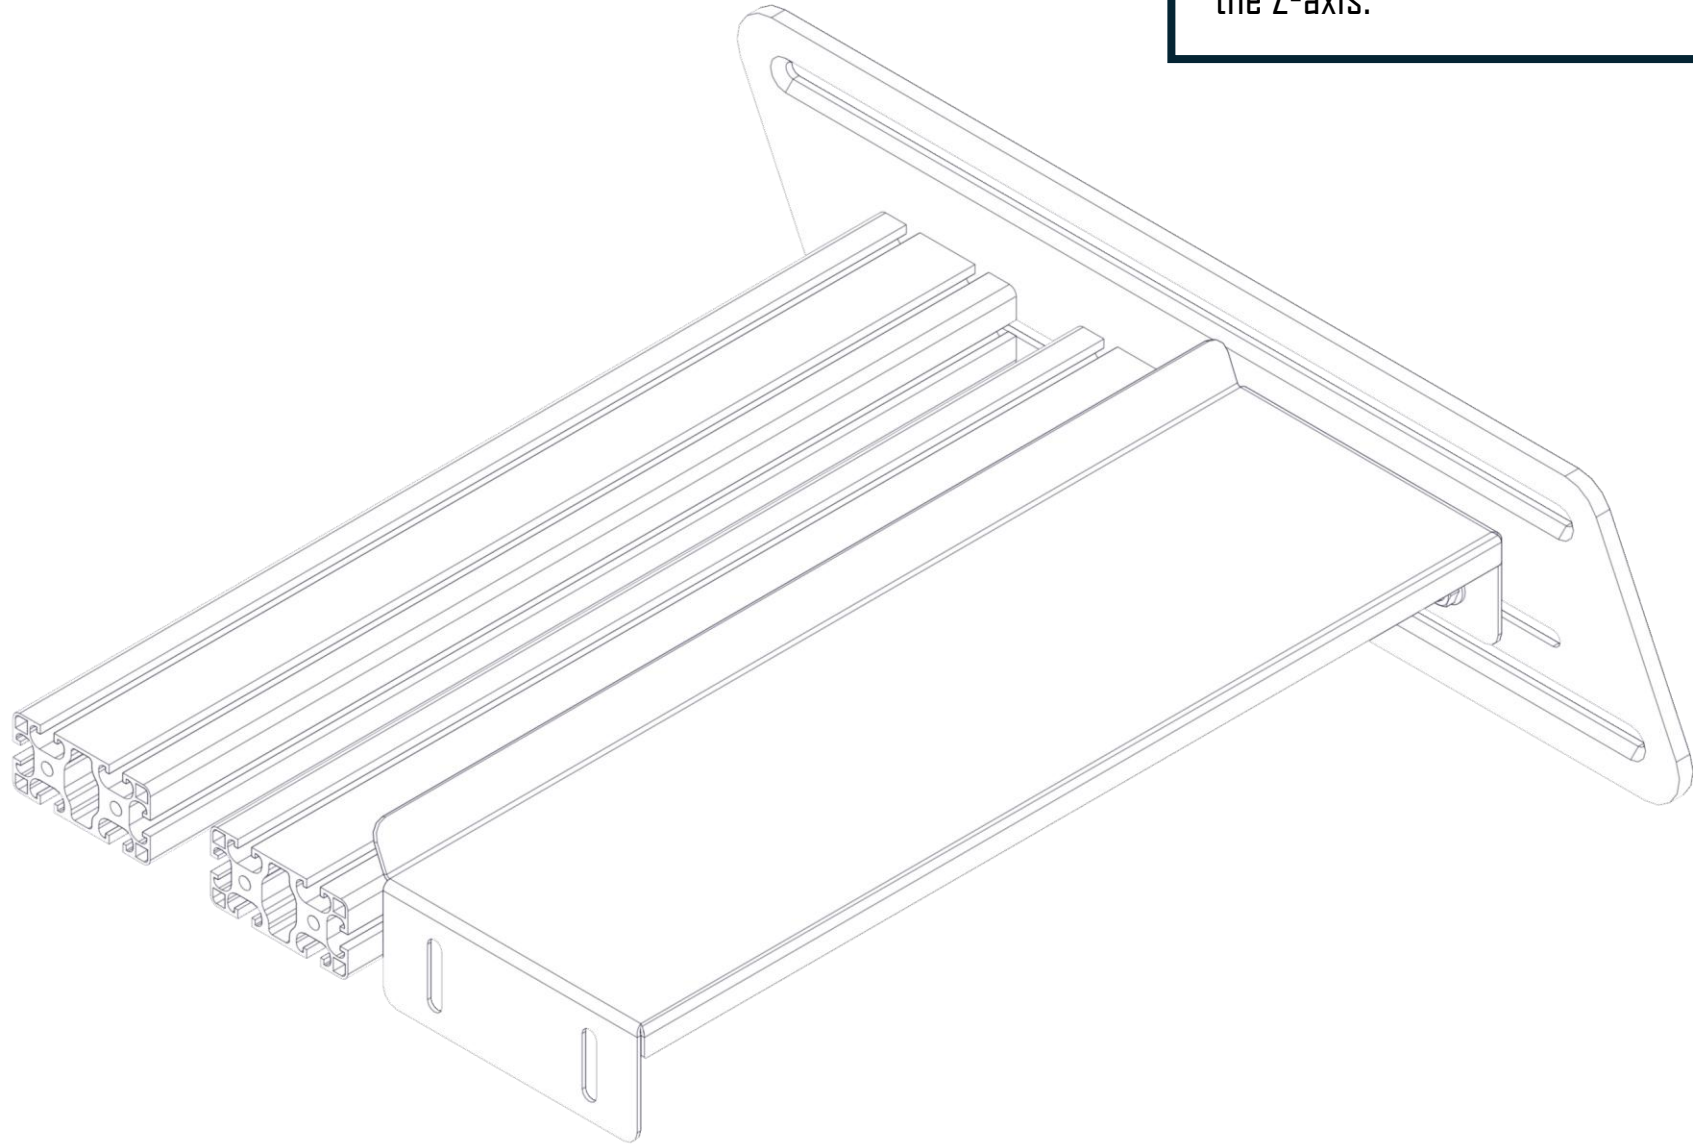

First, take the right pedal bracket (D3), then assemble both aluminium extrusions with four (D5) M8x20 countersunk screws.

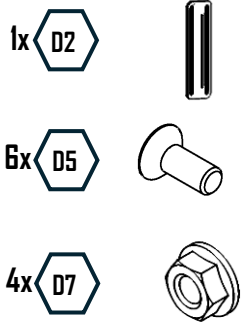

The position and distance from each other depend on your choice and the type of pedals.

Then mount the footplate using (D5) screws and (D7) locknuts.

The position depends on your preference and the type of pedals you have. The heel rest should be located in front of your pedals, so find a position that is convenient for you.

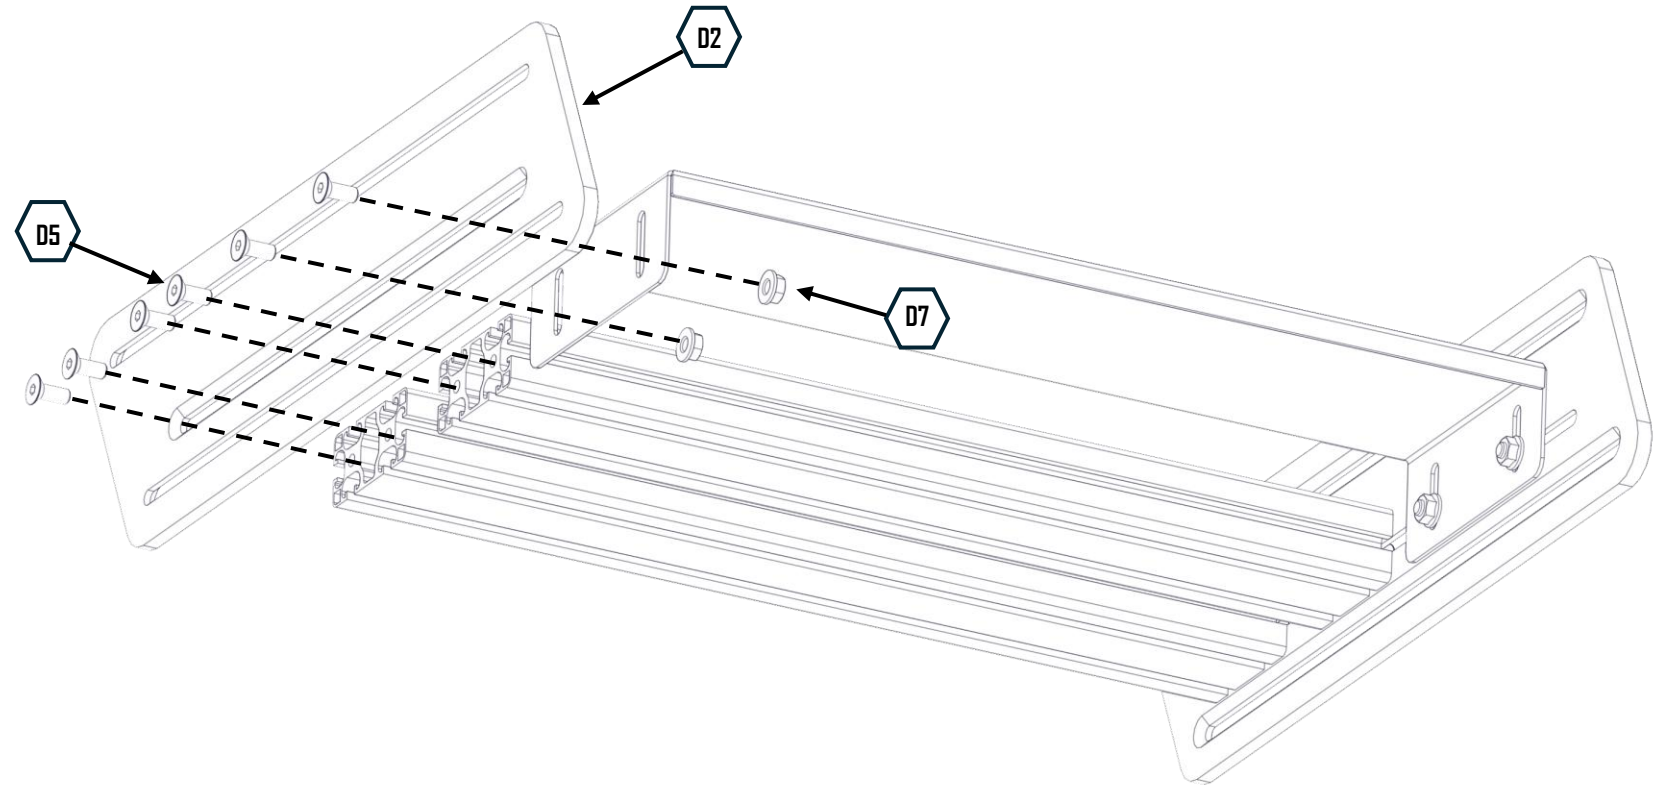

Rotate the unit through 180 degrees around the Z-axis.

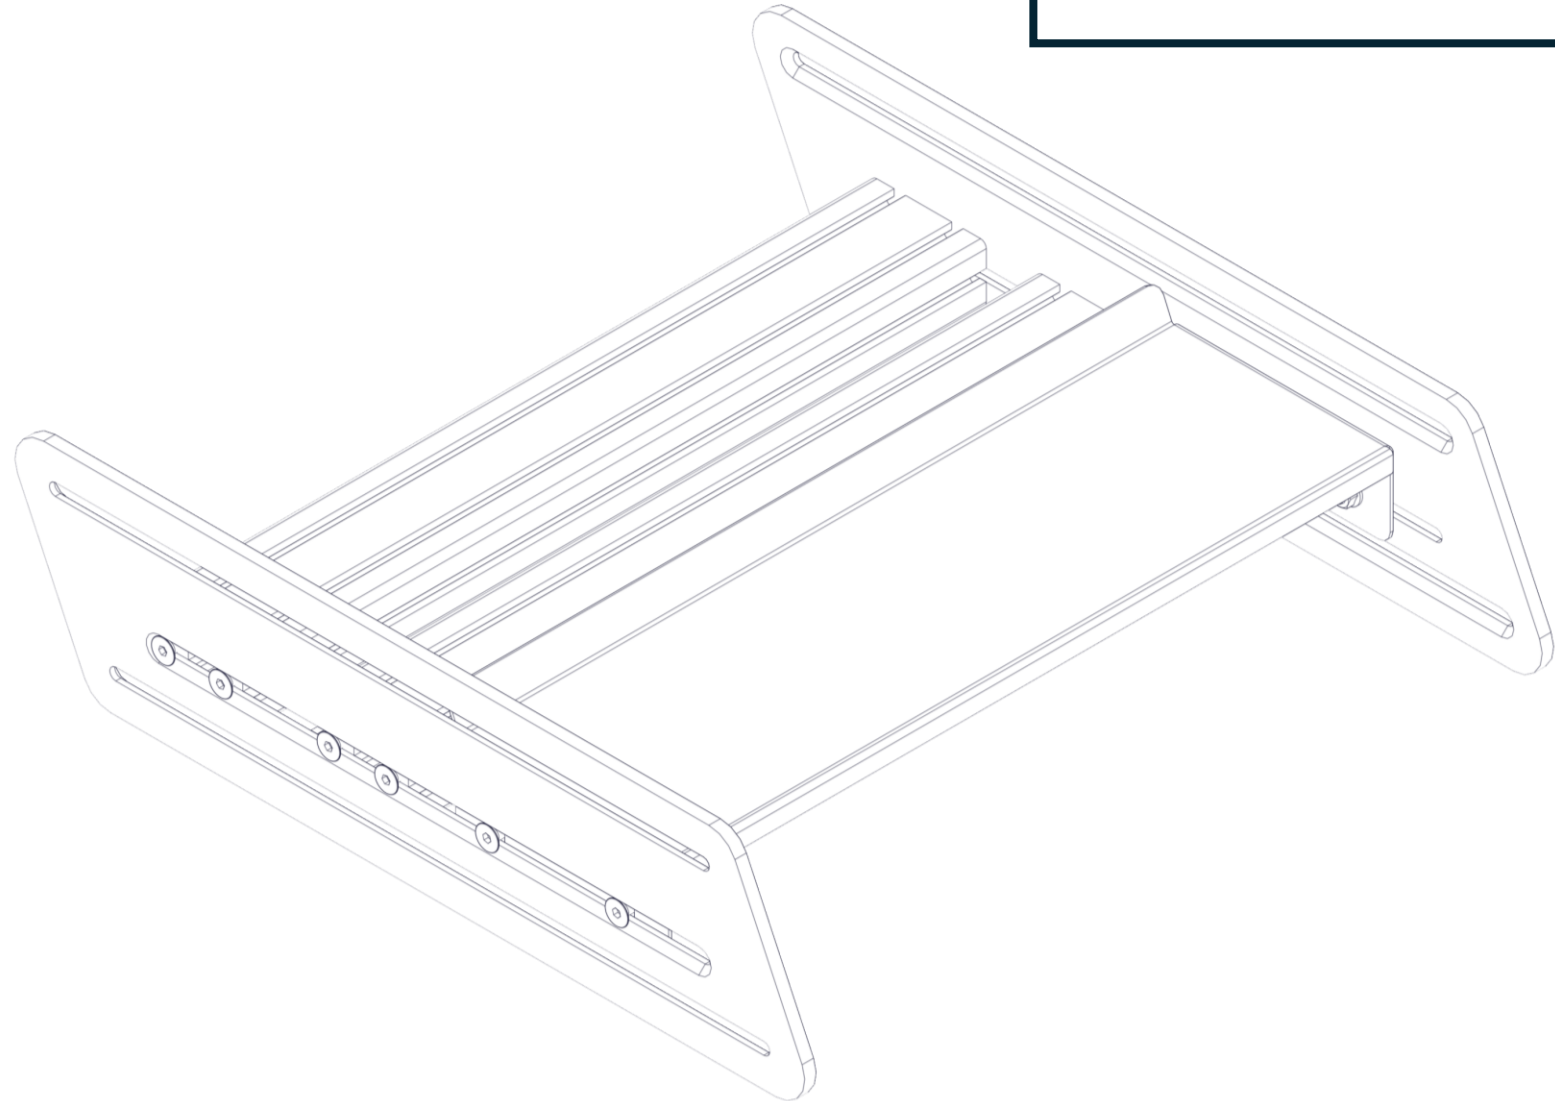

First, take the left pedal bracket (D2) and assemble both aluminium extrusions with four (D5) M8x20 countersunk screws.

Next, secure the footplate using (D5) screws and (D7) lock nuts.

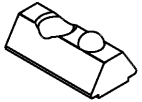

The pedal unit is finished.

Next step: Mounting to the base frame.

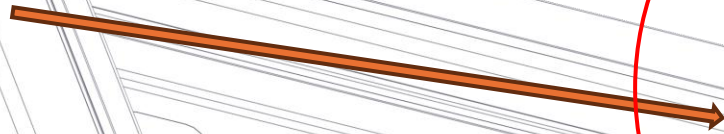

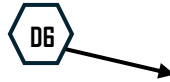

32 / 43

8x
D6

D6

Insert all eight T-nuts into the frame. Four on the left and four on the right.

If you want to mount the pedals in the lowest position, you only need to install three on each side, as the pedal unit can then only be fastened by three screws on each side.

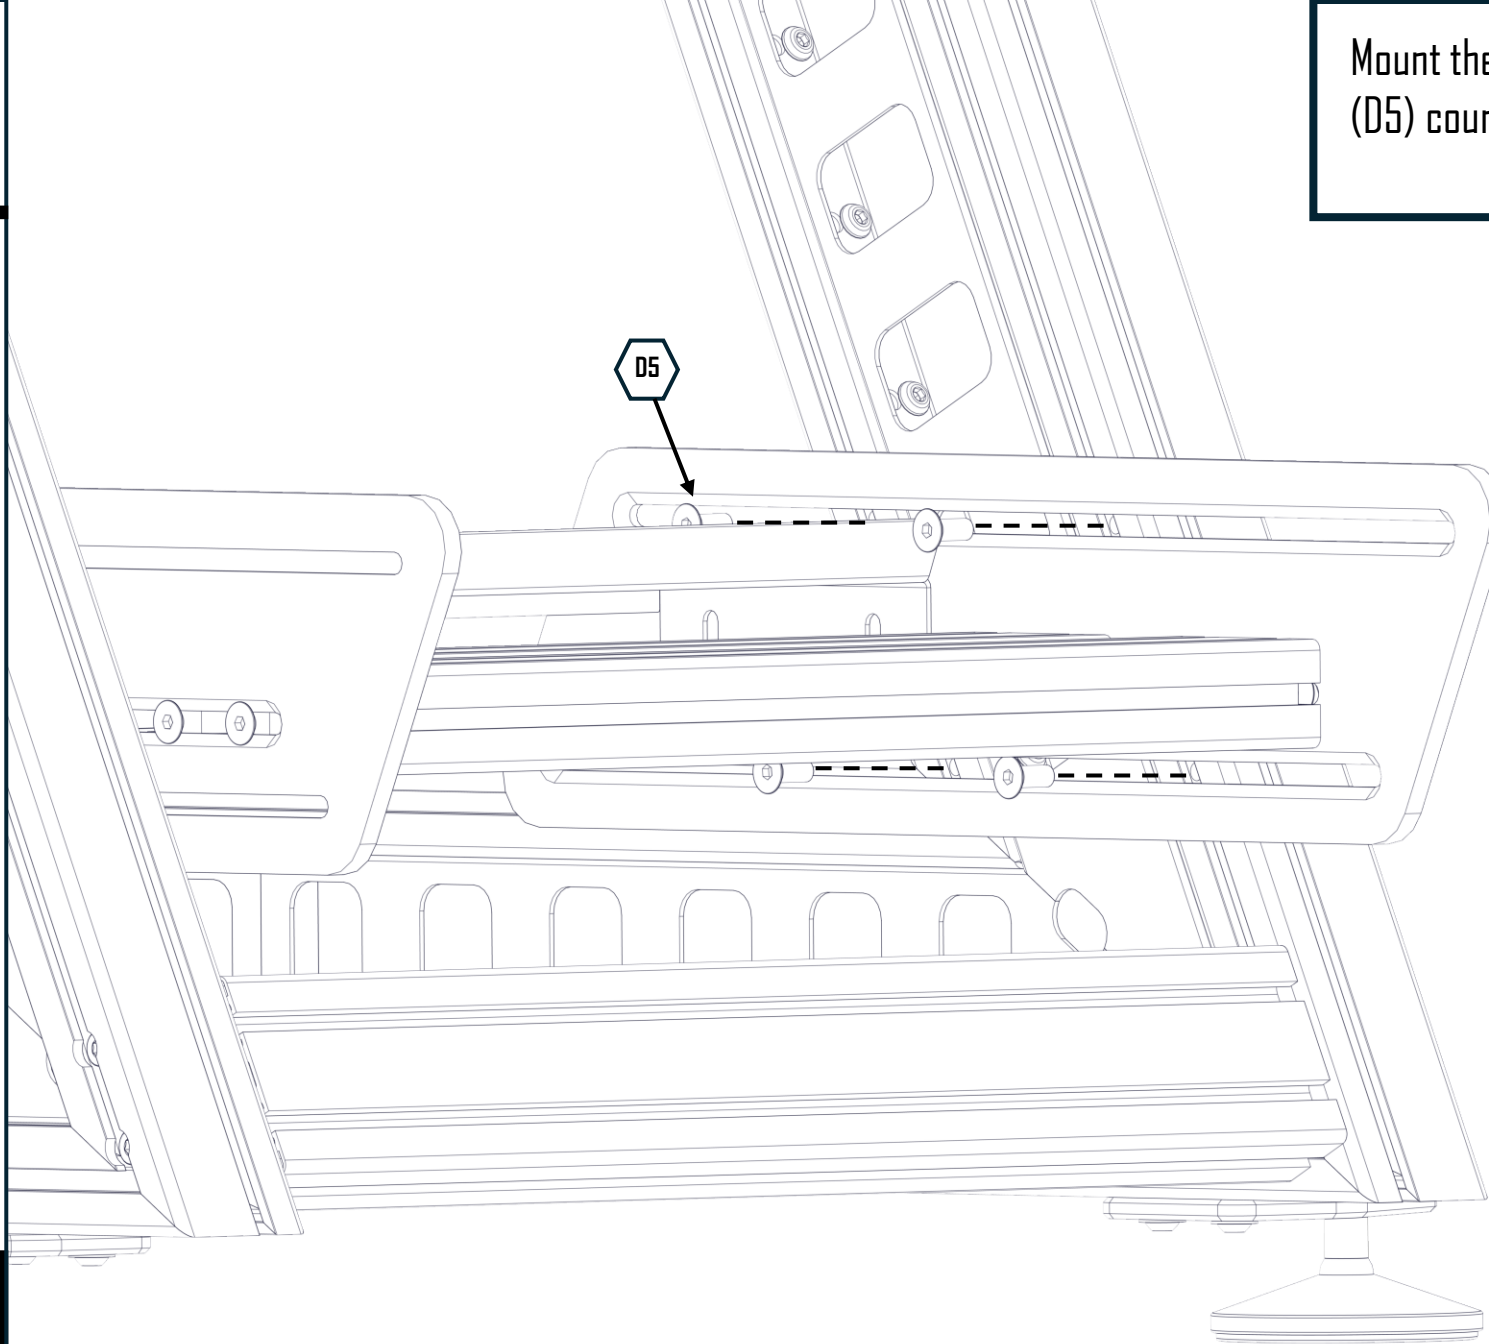

(The marked T-nut must then be removed.)

PEDAL UNIT

33 / 43

Mount the pedal unit on both sides using the eight (D5) countersunk screws (M8 x 20 mm).

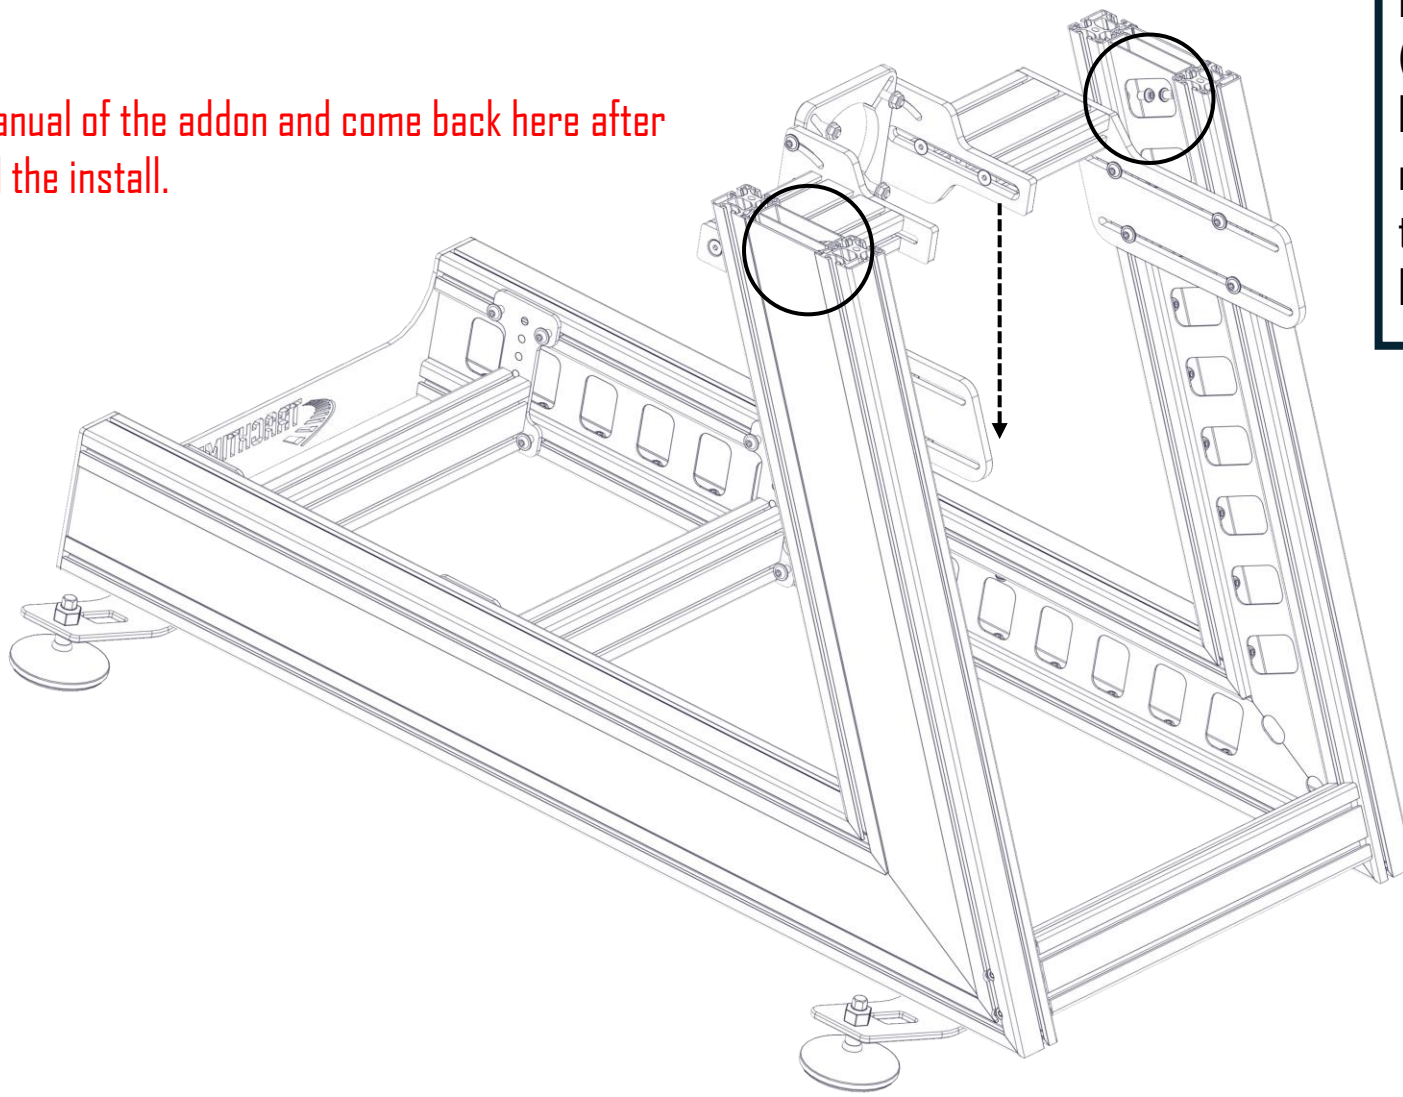

PEDAL UNIT

If you bought following addons for your rig, continue with steps 34-37 after you installed these addons.

- Single Screen Holder
- TripleScreen Holder
- LED-Kit

Read the manual of the addon and come back here after you finished the install.

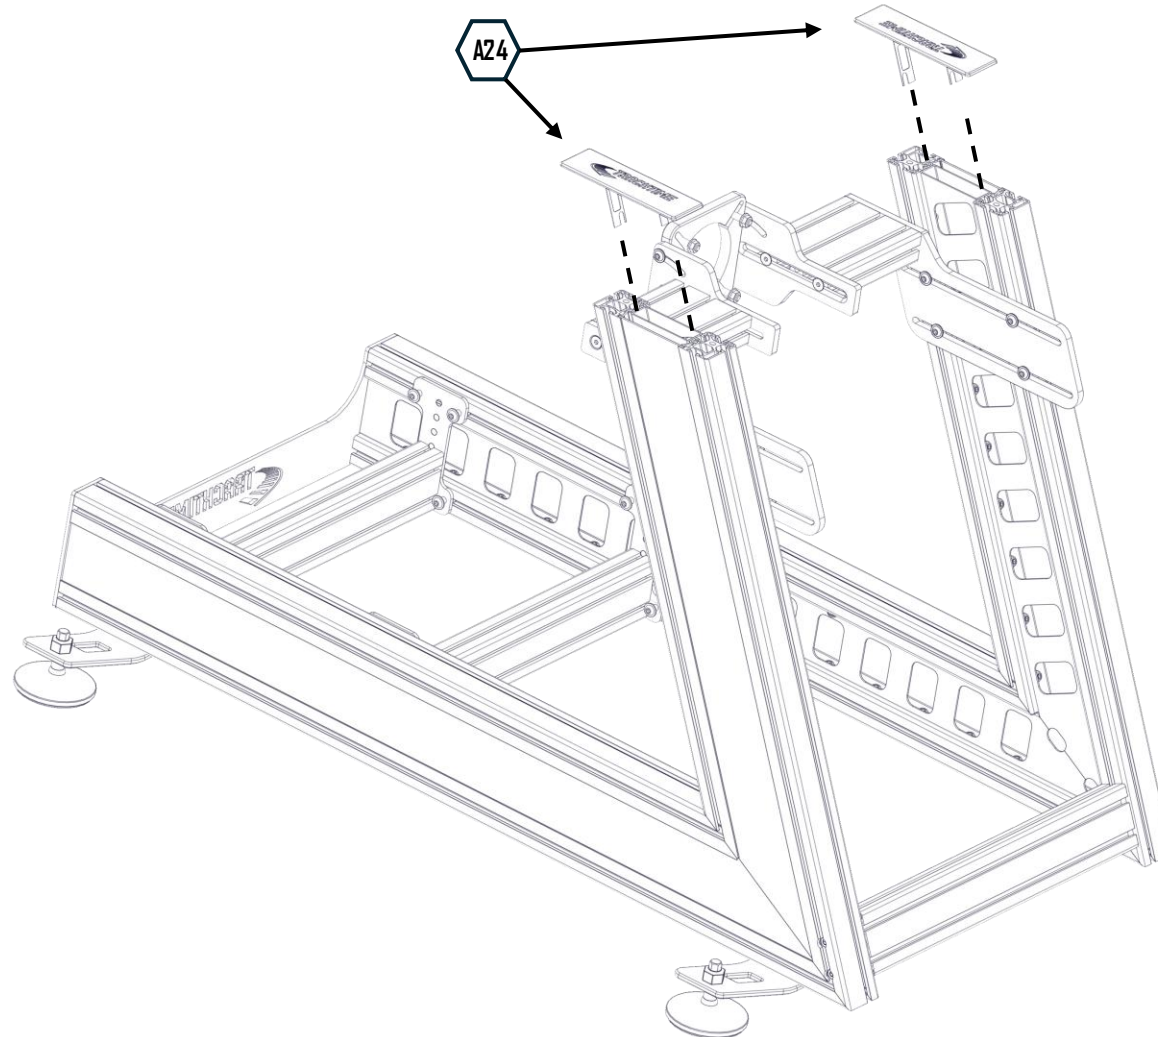

Lower the wheel mount if it covers the upper (A21) M8x12 screws.

Remove the upper 2x (A21) M8x12 screws on both, the left and the right side and put them aside for the later reinstall.

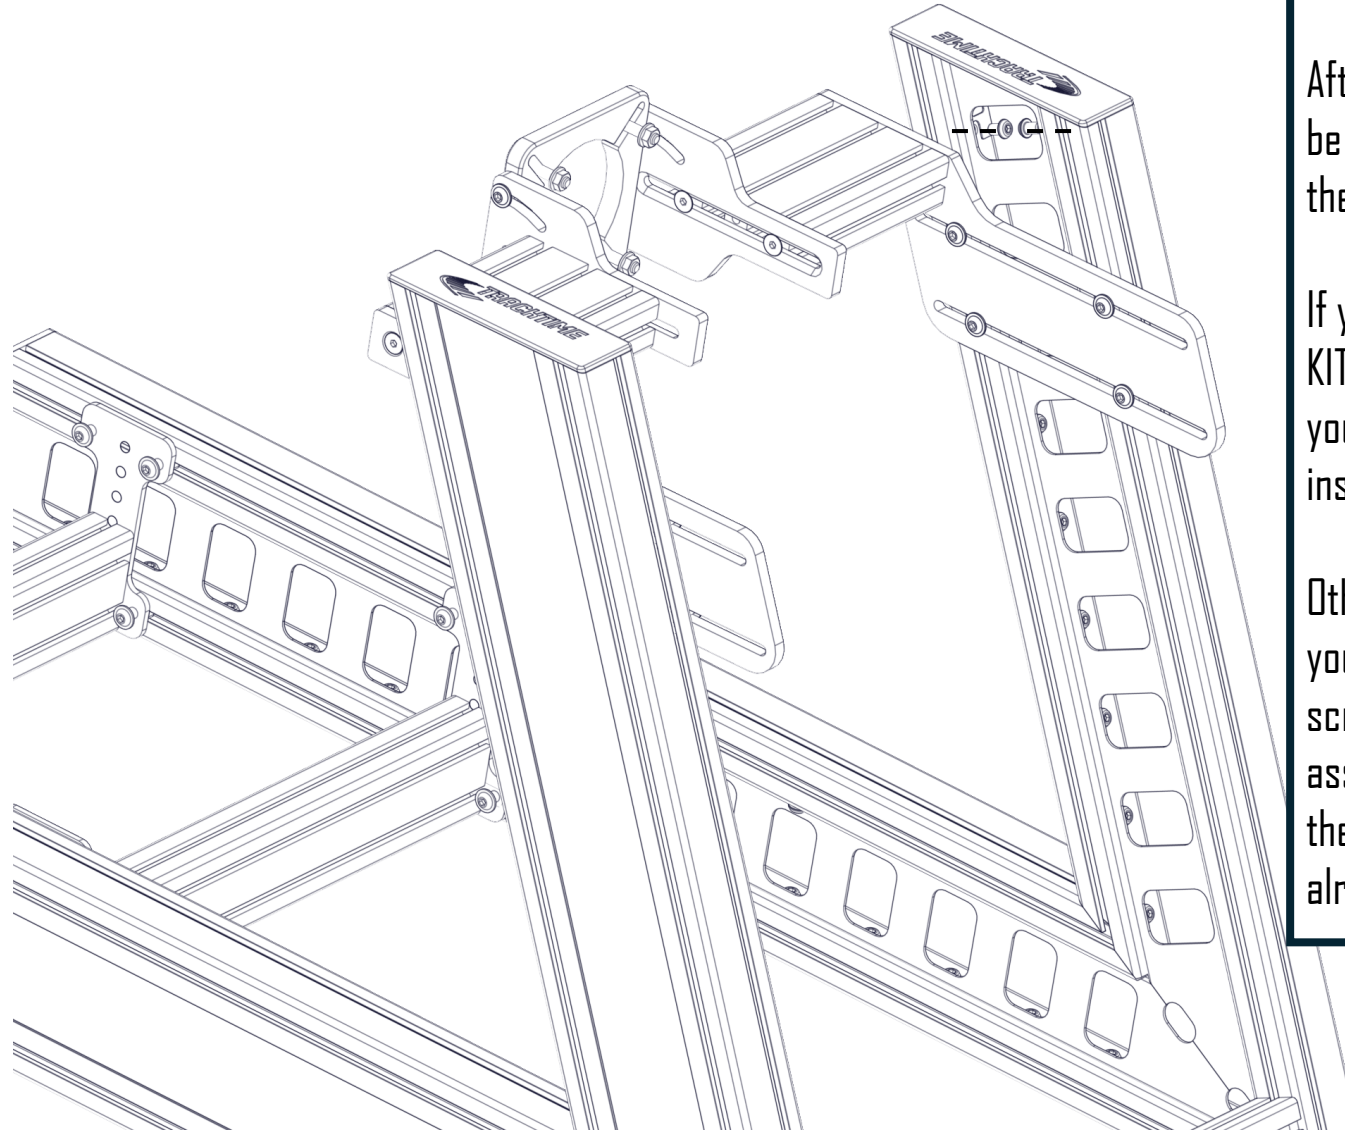

35 / 43

2x A24

Install both (A24) Endcaps.
Slide them into the top ends of
the (A1) and (A2) Baseangles .

END CAPS

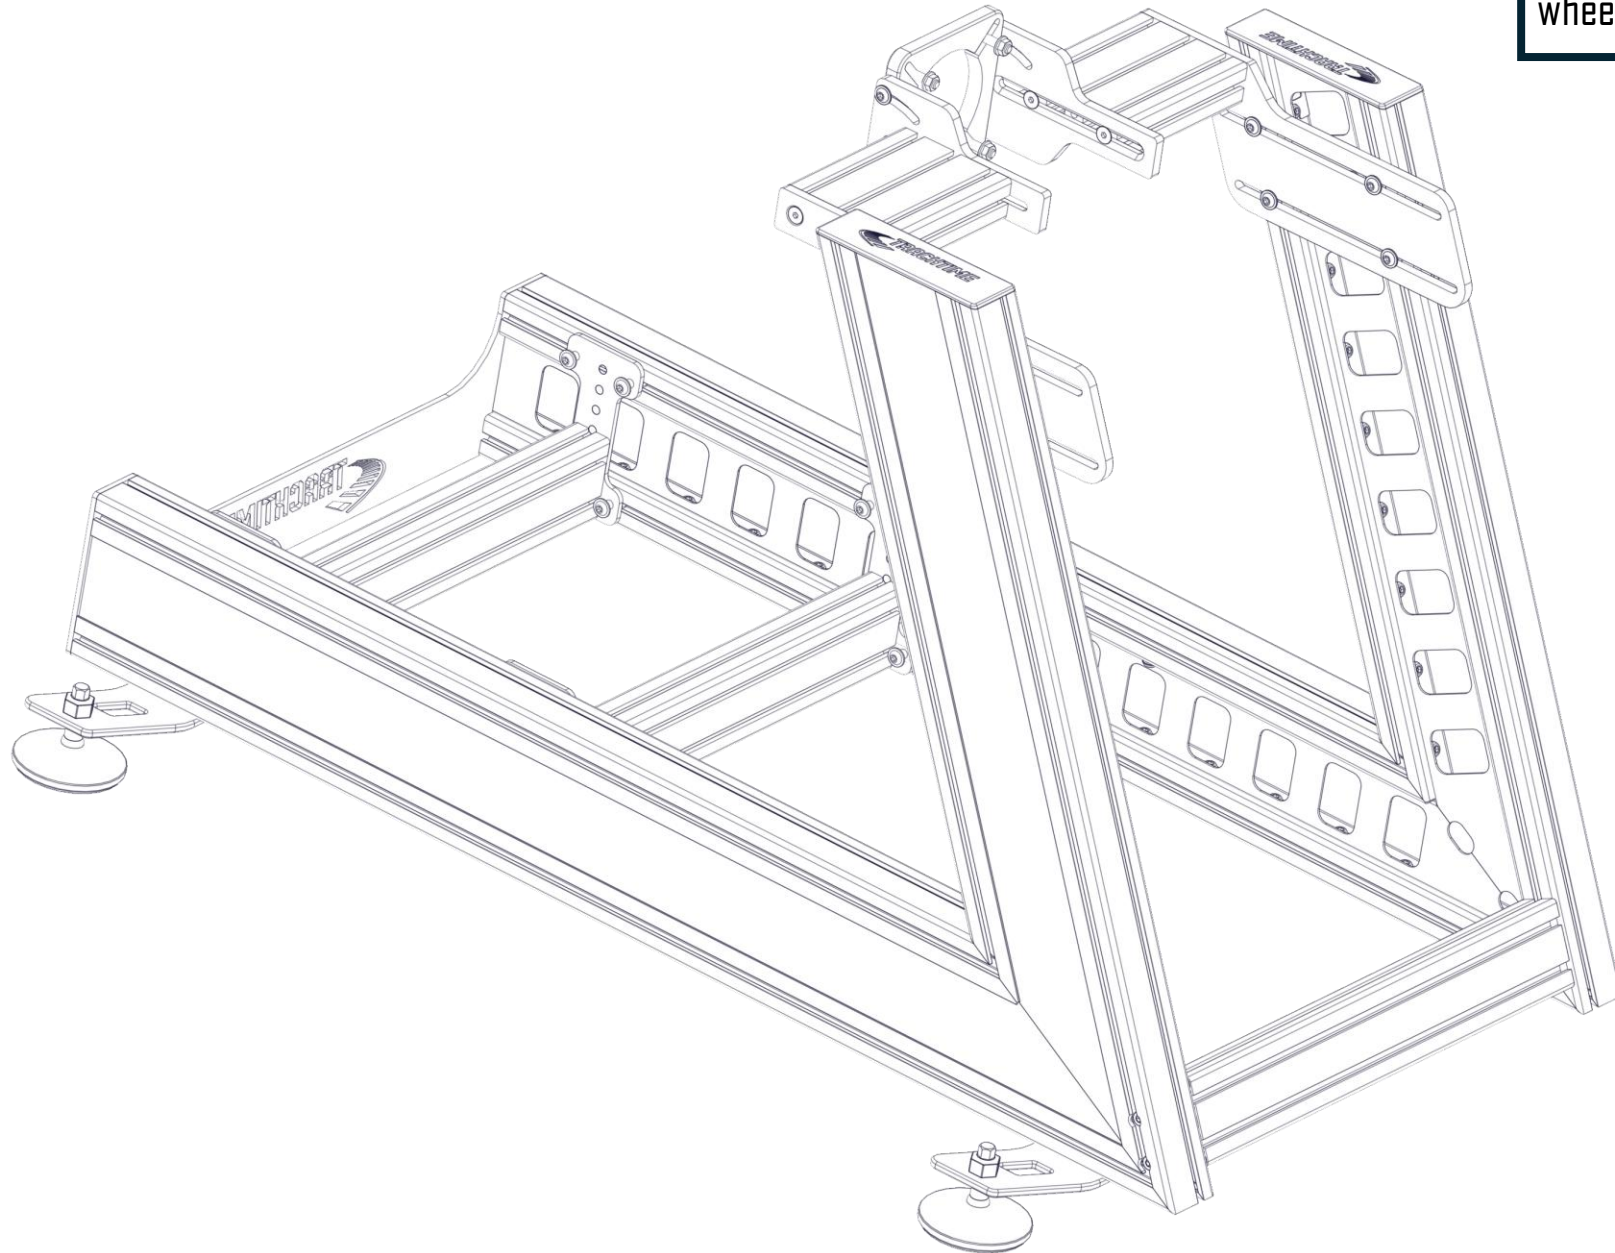

Reinstall the 4x (A21) M8x12 screws.

After that, the Endcaps cannot be removed without loosening these screws.

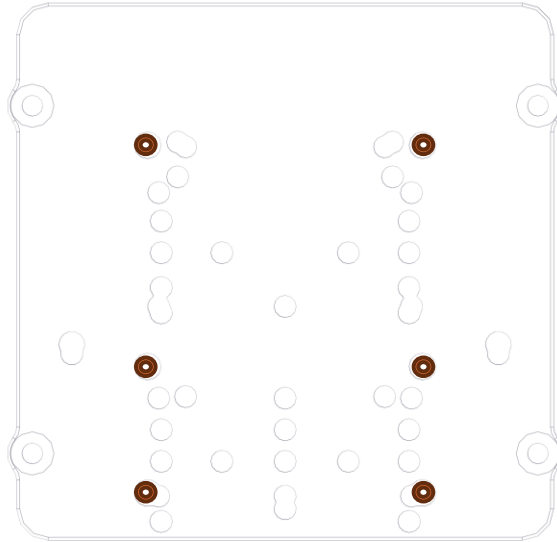

If you plan to install the LED KIT later, or want to exchange your cover panels, don't install these screws.

Otherwise you need to lower you wheel Unit to reach these screws which requires the assist of a second person if the heavy Wheel system is already installed.

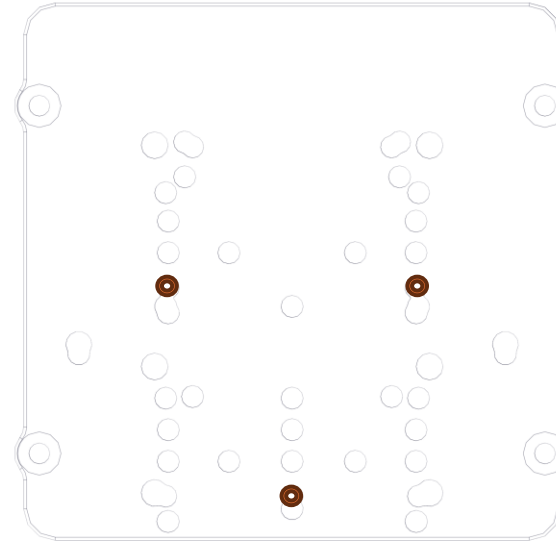

Readjust the position of your
wheel unit.
